YUI FTIDE INVADERS

The world of electronic toys and games comes to Computer & Video Games.

Still in time for Christmas we'll be sifting through the latest bleeping burping and talking creations which are chipping away at the established toy market.

For the chess enthusiasts amongst you we'll have a rundown on the chess machines which are expected to sell this yuletide. From the expensive coffee-table versions. to the travelling companion sets, we'll find out the advantages these dedicated machines have over microcomputer chess programs.

And completing Santa's shopping list will be a pick of the software selection for TV Games Centres and the more popular computers.

THE SHAPE OF THINGS .

The more observant among you, may have noticed a few changes taking place among

C&VC's more regular features. The disappearance of Down to Basic is one example. In this issue you will find no Brainware as this has been replaced by our Puzzling pages. And other changes to the

format are coming soon.

Down to Basic will be replaced next month by a column more suited to most home computer owners and especially the games players. Machine code is already understood by many of C&VC's readers (especially the younger ones it seems) but for those of you who have not yet grasped the fundamentals we are starting up a column to help you get to grips with it.

The column is being written by Ted Ball and since we don't want to overload him too much, the December Practical Programming will be the last in the series.

Our machine code series will quickly be followed by an article showing you how to put your newfound knowledge to good use in setting up a wargame format, but more of that at a later date.

Kit Korner is also coming to the

So none of the other punks on the street can get hold of my cony And that's important to me. Mebbe it's important to you too. So go n' see your newsagent with that coupon below all filled out. If he's like Harry here, you're gonna like him.

end of its run. And Keith Mott will he writing his last piece for us under that banner in this issue. Then he is being rested for December before returning in January with a projects page which will help you to get more out of your computer.

GAME WITH A DIFFFRENCE

The Seventh Empire was the rebel which challenged the Stable rule of the known galaxy and

set a pattern of warring confusion which holds sway to this day. Piracy became commonplace, no

planet was safe from the threat of invasion and whole star systems changed allegiance as the tribes fought for the raw materials on which galatic fortunes rested

The Seventh Empire is the name of a computer game so different it will take us three issues to get it started. December sets the scene of the game which can even be played by those without a home computer.

To my newsagent: Please deliver reserve me a copy of Computer and Video Games every month. Price 75n Address

STAR GUARD FOR GRANNYI

Star Guard sets you the task of preserving fuel pods from a fleet of attacking aliens.

Granny is probably not in the best of taste but its heart is in the right place so we published it anyway.

MARK GETS HIS PRITE

Winner of our Beat-the-Bugs Competition. Mark Williams from Sutton Coldfield in Birmingham came down to visit us and collect his BBC Model B machine.

Mark was also given a selection of Acomsoft cassettes to go with his machine - courtesy of Small Enterprises and Acom.

But his success did not stop here. for a local businessman, who heard of Mark's programming expertise has asked him to help set up a microcomputer system for his insurance broker firm.

Please drop as a line at: Computer and Video Games, EMAP, Durrant House, 8 Herbal Hill, London ECHN Syll. THE Lyould have been pleasing. I mark can mean many things. I CORRE ALLE

SPOT THE BODGE! Dear Sir,

Dear Sir, After unscrambling your Mini Defender program for the IK ZK81 — talk about spot-thebodge, huhi I found that the game itself was very enjoyable and interesting and I must hasten to add that the unscrambling bit was fun—

GREAT FUN!

My high score was 535 and this was obtained after changing the loop in 'E' (line 70 — yes the one that looked like you had a rush of M/C to the brain: '(OINKEYS — I ask you) to FOR E = 9 TO I so that another 'group of alleins' denoted by a "?" — attack

—denoted by a "?"—attack before the loop ends.
Then I proceeded to add a flasphip (OU —so it was an inverse less-than' sign) which looked real menacing —honest I was scared —pertified! This gave a random score between 0 and 3b by (INTRID' 5) (ISE) <> 6(8 and pushed my final highest score to 822 — yes 822 — lefs see someone beat that then!

Phillip Hall, Hinkley,

FRUSTRATED OWNER

Dear Sir.

Thank you for a very good and interesting magazine, it has been a great help to me and my programming over

the past month. However, I own a TRS-80 colour computer and being video game fanatic, I am getting very frustrated. I don't expect a program listing in your magazine every month as I do understand that the TRS-80 colour computer does not seem to be very popular, but a mention in your September Graphics feature

would have been pleasing. I cannot understand why the computer does not seem very popular with established TRS-80 model 1 and 3 software producers, I am finding it very difficult to get new software.

However, I would like to pass on a bit of information, if I may, to other users. I have been in contact with Microdeal of Bodmin, Cornwall, and found that they have a lot of imported products for the colour computer. So there seems to be a ray of hope there!

Mr A.E. Mann, Boston, Lincolnshire.

VIEWS ON MICROVADERS

Dear Sir, In response to your request for comments on the Microvaders program in the

July issue. Here are mine:

1. Having the machine
code in separate REM's and
putting it up to the top of the
memory is a big advantage
over putting it on top of a

REM full of 0's.

2. Unfortunately I found that the M/C program to move it up in the memory didn't work. So I wrote a basic program to do this for me but it takes about 50

seconds.

3. The M/C program in line one as printed is very

I enjoyed playing the game with my home-made joystick. I am looking forward to more M/C programs in Computer and Video Games. Adrian Ellis

Adrian Ellis Worsley, Manchester. DISC DRIVE

DOUBLE . . .

Dear Sir,
Your reply to Mr Spencer
in the September issue stated
that there were no disc
drives available for the
Sinclair ZAS1. At present I
know of two disc drive
systems for the computer.
One is produced by Monolith
Systems and the other by
Macronics

As both companies keep lowering their prices in competition, it is hard for me to say a price. My advice would be that Mr Spencer

contacted the two companies. There addresses are: Monolith Systems, 5/7 Church Street, Crewkerne, Somerset. Macronics, 26 Spiers Close, Knowle, Solhull, West Midlands

I am glad to see a binder from my copies of Computer and Video Games — they will no longer be strewn all over the floor! By the way keep up the good artwork both inside and front covers. James Mortleman, South Woodford.

SOME ALIEN BUG TROUBLE

Thank you for the amendment sheet concerning the Microvaders program from your july Z-Extra supplement. Unfortunately, this was not enough to make the program work. I wrote to Microx

requesting an original listing.
I received prompt attention, a
listing and the answer to my
problem.
Mr P.W. Norris of Microx

Mr P.W. Norris of Microx pointed out that in line 18 of the program the 10th character from the end of the line is a 'B' and not an '8', which is almost unbelievable when looking at the listings.

I wish to express my thanks to both your magazine and to Microx, for your attention, to which end I hope you publish this letter.

Mr C. Brooks,

Cheltenham, Gloucestershire

Dear Sir.

DISCOVERING TEXAS

I bought your magazine for the first time in September and I was quite startled to find so many programs in your magazine for only 75p!

I recently bought my son a Texas Instruments computer and I am looking for game programs for him to occupy himself with. I looked through your magazine and did not find any TI programs. After all the TI is a good computer so why is your magazine neglecting this well developed piece of machinery?

machinery?
P. Evans,
Great Yarmouth,

Norfolk.
Editor's reply: Our
magazine is now on the TI
bandwagon Mr Evans, there
is Space Laser in this issue.

PLAYING THE MICRO GAME

Dear Sir, Thank you for a marvellous and good value for money magazine which I have read from issue one. I particularly like Video Screens and

Arcade Action.

Being a newcomer to the micro scene I would be grateful if you could help me over the problem of which micro to buy.

My main reason for wanting a micro is for playing good quality games and high resolution graphics are important to me. My price boundary is about £200. Can computers at this price play games up to the standard of

Mattel's Intellivision?
Finally, having owned an
Intellivision for quite some
time now, I would be grateful
if you could update me of any
new developments to do with
Mattel's computer.
David Liddle,
Hexham,

Northumberland.
Editor's reply: To answer your last question first David, the standard of software for most of the popular home computers is as high as Intellivision

games.
Sound and good quality
graphics are available from
several machines under
your £200 ceiling. The VIC20, Spectrum, Rtari 400,
T.1.99'4a and the Dragon
may all be worthy of your
attention. For further details
on what these machines are
capable of read our Buyers
Guide on page 86.

FROM THE SHARP END

Dear Sir.

I have recently acquired the use of a Sharp MZ-80K computer. Unfortunately however my programming knowledge is limited and I cannot yet make my own good games listings.

Your magazine was recommended to me by a friend as having many listings for the MZ-80K, but I have found to my disappointment that you do not.

Please print some

interesting, exciting and adventurous programs for my computer. You often do a Sinclair Selection so why not do this for other computers. I know several programmers in my area who would also appreciate more Sharp

John King, Cheadle Hulme,

Cheadle Hulme, Cheshire. Editor's reply: Hardly fair criticism John. The Sharp has frequently been the computer to feature our "star" games. Ideally we

computer to feature our "star" games. Ideally we would like to have several programs for each computer, each month, but space restrictions make this impossible. The Sinclair Selection you mention, consisted of only IK programs which would be a waste on the Sharr's large

BACK TO BASICS Dear Sir.

Dear Sir, First of all, a great magazine! Glad to see that there is a colourful magazine bringing a bit of relief to the usually dreary magazine racks.

dreary magazine racies.

I have purchased all but two of your issues, and was particularly interested in June edition which featured World Cup Manager. I am a great football fan, and would very much like to try this game, in only I had a Sharp MZ-80K. Unfortunately, I haven't got access to one of these

machines, but am at present awaiting the delivery — seven weeks so far — of my 48K Sinclair Spectrum.

I have not yet been able to grasp the more difficult aspects of Basic programming I attempted, however, to convert World Cup Manager game to run in Sinclair Basic, but I became stuck with a few things and was wondering if you could help me to convert such expressions as "Left S", "Birth S", "Mid S" and "O", I

Goto . . 'into Spectrum Basic.
Please could you help by
publishing those lines of the
program concerned as I would
dearly love to try the game on
my Spectrum, when it arrives.
S. A. Wiltshire,
Peterborouth

Peterborough,
Cambridgeshire.
Editor's reply:
LEFT \$(a\$,n) by a\$(1 to n)
RIGHT \$(a\$,n) by a\$(n to L)
where L= LENa\$
and MID \$(a\$,n],n2) by a\$(nl

on I GOTO by
IF I = 1 THEN GOTO 100
IF I = 2 THEN GOTO 200

VIC MEETS BUZBY!

Dear Sir, I am writing to your very good magazine with the hope that you could answer some questions.

Please could you tell me if any company produces adventure programmes for an unexpanded or expanded VIC-20 i.e. Scott Adams. Also when I bought my computer a friend bought one at the same time — they are both VIC-20's. Is there any way that my VIC-20 and his Vic can swap programmes, communicate, etc. — over the telephone lines?

Ramsgate, w Kent.

Editor's reply: Yes, Richard you can link up with your friend using the telephone lines. You need an IEEE488 capability and this can be provided by the appropriate interface, say VIC1112 at £44 from Commodore.

published some software for PETS connected together and this can be adapted for the VICs. I suggest you contact them at their offices in Slough for programs. The address is 675 Ajax Avenue,

Slough, Berkshire.
There are a variety of
Scott Adams Adventure
games which can be
purchased from Commodore.

MORE FOR UK, OK?

Dear Sir,
Thank you very much for a
brilliam magazine, it is the
best money can buy. I have
only one complaint. I have
not seen any reviews of
UK101 software, please could
you publish one.

Being a UK101 owner, it is rather difficult for me to transpose programs from VIC, Atari, ZX81 and the like. I am sure many UK101 owners would love to see a program for their machine published in your magazine. Bobby Lynas, Marvate.

Kent.

Editor's reply: There is not much games software around for the UK101

Bobby, but when we do get to hear of a new game, we will be a sent of the soft of th

COMPUTER & VIDEO GAMES 9

COMPETITION COMPETITION COMPET

Every Fantasy Should Have Its Own Dragon

In the realm of fantasy, one computer has to stand out. I refer

of course to the Dragon 32 smoking away quietly in

that dark corner.

A Dragon microcomputer will go to the winner of our fantasy ideas competition. So if you could find room in your house for a well-behaved Dragon then read on . . . or better still read the feature on page 24 first

If you've digested the tips on building your own computer fantasy game we now want you to dig deep into your imagination and come up with just such a game.

You can either go back in history (or even pre-history) to set your game against a backdrop, like Gladiator. Or you can go forward into a distant future.

But fantasy should put no holds or bars on your imagination and perhaps you would like to set this particular adventure in a time that never was.

Your entry should include:

The idea: not just a title but a description of how you think the

game would work and how it would be operated.

The algorithms: the basic functions which would form the core of

tions which would form the core of the program and determine the outcome of conflicts.

Practicality: a paragraph outlin-

ing why you think the game would be commercially viable.

The entries should be sent to: Fantasy Competition, Computer & Video Games, Durrant House, 8 Herbal hill, London ECIR 5JB and reach us before 16 November 1982. They will be judged by Mitre The Welsh Dragon has made a fier entrance to the microcompute

Styling itself the "family" micromputer, it is selling well at its £ price tag and looks set for a go Christmas.

The winner of our Fantasy Game impetition will have a Dragon or i hearth complete with 32K or emory and a screen size of 16 es by 32 characters. If where into the common dones.

It plugs into the common dometic television and uses a househol cassette recorder to save and loa

coorana.

Is already has several fantasy adventures in its software range and with independent software range and with independent software houses now producing games casettes for it, the machine should soon have a comprehensive library of games software behind it.

So no dragon feet, get those unajunations working overtime and those entries off quickly.

Wargames, whose Mark Blundell wrote the article on building a fantasy game and if they are sufficiently impressed, Mitre have undertaken to try and turn the winning entry into a computer moderated game and invite the prizewinner to help produce and market it on a royalties basis.

royalties basis.

Employees of EMAP, Dragon
Data and Mitre Wargames and their

Data and Mitre Wargames and their relatives may not enter the competition. The judge's decision is final and no correspondence will be entered into.

BRAINWAR

The answers to last month's Mind Routine are:

 Maximum product of node sums = 34012224
 Minimum product of node sums

= 25625600 3. Maximum sum of node pro-

ducts = 2925
4. Minimum sum of node products = 1212

The solution to October's Nevera Crossword is printed right.

Confessions of a Bug

There's nothing we Bugs like better than a good Atari program to get our teeth into.

T. Hitch has run up an Atari bugging routine so sophisticated and subtle that it defies solution.

subde that it defense solution.

Take Wild Strawberries for ample, never in the history of this applied to the spill over a program. Half of them seem completely unable to get the game running no matter what. The other half are phoning up to congranistic EAVE on producing such a good Atari game which runs first time on being entered. Even better, the ones who have problems all the colors of the colors of the colors of the colors of the colors.

You should see the poor editor tearing his hair out trying to understand what's going on. The only piece of advice he can offer is to check all the 0 and Os in the program carefully.

Vic owners may have had some difficulty with Brick Blaster as the cursor control symbols have printed up badly. If you have had problems with this game please ring or write for a correction sheet.

COMPETITION COMPETITION COMPET

TION COMPETITION COMPETITION CO

If you have entered our Pinball Competition please be patient as these have to go to America to be judged by the Bally Pinball Division.

They will be back to us soon to give us their nomination for the lucky winner, who is due to receive a Bally Electra Pintable in his front

And hopefully find that Bally have taken his design ideas and incorporated them into the sort of pinball machine he would like to

But a special thanks from me to all the many people who put so much effort into the competition.

We were overwhelmed by the standard of the response and the carefully constructed and detailed diagrams which accompanied the ideas.

The Sinclair game idea competition has been whittled down to the top 20 ideas.

These are currently with software house Psion, whose top game designers will be trying to pick an overall winner from here.

 The winners of our September Brainware Competition are: A Crowhurst of Drakes Way, Mariners Park, Portishead in Bristol who won the Nevera Crossword and Richard Parkin of Northwich Road, Weaverham, Cheshire who was first out of the hat with our Mind Routines answer correct. Champagne is on its way to both.

OUTER SPACE ARTHUR NEGUS'S

These outer-space Arthur Neguses are controlled by Dean Goodman and

are currently engaged in notching up points in the C&VG game of Starweb. Dean's Itemizers are currently up to their short green necks in intrique and tactical thinking so convoluted as to make the valuing of a early Chippendale seem pedestrian in comparison.

So on with the antiques space highway show . . .

As the richest person in the solar system. Itemizer the artifact collector becomes monumentally excited by the idea of owning unique things.

On many of the worlds in the system there are various indestructible artifacts left behind by a now extinct race of beings.

Despite his passive nature. Itemizer will do almost anything to possess these objects, although aggression is not his strongest point. On one occasion driven by

greed, he attacked a foreign fleet but now regrets that action as it appears to have been a tactical mistake. Overwhelming reinforcements arrived the following turn calling for a quick exit by the home fleet.

Tactics have to be adapted as other game characters reveal themselves. Because each player needs different things and because each player acts in different ways, some middle ground usually exists for negotiations and barter Successful negotiation has so far proved difficult however

Turo fleet controllers appeared before contact had been cemented (leaving populations converted to religious extremism), and another controller destroyed the fleet sent to establish contact!

At the highest level it is important to have an overall strategy and to keep to it. Itemizer keeps his forces and artifacts close to his homeworld and avoids spreading fleets thinly. Unprotected worlds are weaknesses and the empire could become

So what orders will be sent-in next turn? The empire's centre line is under threat from a Pirate and as the extreme right flank has proved unprotective, a shift of two fleets from the right to help reinforce will be necessary. Probing fleets will be sent to explore three worlds on the left flank in the hope that more artifacts will be found.

If you get an opportunity to take in a computer-moderated game such as Starweb, jump to it. Intelligent gaming is both mentally stimulating and intensely enjoyable, despite the lengthy turn-around time (four weeks).

ling new page of brain-teasers.

SOMETHING FISHY IS GOING ON

Anoling is one of the most po lar nastimes in this country. Now you can take up fishing without having to sit in the rain for hours, thanks to Calisto Software. Cast your rod into the sea at

the end of the pier and see how many fish you can catch on the end of your hook.

This is the simple aim of the computerised angler in Fishing - the latest game for the ZX81 from Calisto.

Side two of this cassette features a computer version of the popular casino game Roulette. The wheel is displayed on the screen - though it does not spin.

Instead the ball moves around the wheel stopping at random on one of the numbers on the wheel's perimeter

Each player is given £1,000 to start - the name then being played according to the normal rules of Roulette. The game allows up to four people to gamble

Roulette and Fishing are available from Harrogate based Calisto Software at £2.50 including

computerised golf game. This one features authentic golf course obstacles such as bunkers, trees, and of course the dreaded "rough". The course itself is represented on the screen in 3D and is randomly selected.

the popular arcade game Battle zone, a chess program, and Fourin-a-Row, a computer version of the Connect Four game in which you must join up four counters in a faster time than your opponent. The games are available from of cassette-based games for the TX Software of Harlow, Essex at Texas Instruments 99/4a. Others E5.00 inclusive.

THE MOONS OF JUPITER MOONBASE 10

BATTLE FOR

Join in the fierce battle for the moons of Jupiter! The battles are based on three well known Atari arcade names

The game has seven different skill levels which offert the distance you have to travel to reach the moons and the speed of the

The aliens you have to do battle with in this game are alien attack shins which are worth 100 Space mines are only worth 10

points but you must be careful end you the game.

For each 1,000 points you score you will receive a reserve

These are carried over from battle to battle, and appear just to the right of the score during

the battle. There are also invisible alien scout ships to contend with and if you survive the preliminary alien robot commander to be

One interesting feature of this

This comes on cassette with the programme and consists of side A which is a long narration to be used with the game the first time it is played and side B which is considerably shorter to be

Moonbase IO runs on an Atari 400 or 800 from cassette or disc and is available from West Midlands based Softcell. At £24.95. Also new from Softcell this month is an adventure game in which you play the part of a

This ghost has the haunting task of seeking out treasure. This treasure is hidden in 30 rooms of a haunted house - so only ghosts with high spirits need apply

This is a real time game played

It costs £19.95 and runs on Atari 400 and 800.

SOCCER

Never mind - you can still score the winner for your favourite team with a little imagination and this latest soccer simulation

Using a joystick you can move your player forward bringing the ball into your opponents half. Shoot by depressing the fire button on the joystick.

To tackle you simply place vourself in the front of your opponent, or intercept passes - just

as in a real game. The game features a rolling display of football field, including goals, line-markings, a clock to keep the time, and 22 players in black and white strip. You can play against a friend,

MONSTERS, **ELVES AND TREASURES**

XANADII ADVENTIIRE

game is the latest novel idea for the BBC machine.

It's based on the well-known fantasy role-playing game cludes many of the features Dungeon fans will have come to expect in a good underground

Just like the "real-life" version there are nasties down in them there dungeons.

In this version you can choose to do battle with the evil assortment of elves, dwarfs and monsters that attempt to thwart you in your bid to win the treasure and escape from the caves.

You can also choose to play against another person attempting to beat him to the glittering prizes hidden in the dank, dark caves.

Xanadu Adventure is available from Berkshire based Hopesoft

You can also team up with a friend to tackle the computer's squad - just in case it proves to be a tough opponent!

Soccer runs on Atari 400 or an 800 and is one of a new range of games from Thorn FMI, the giant electronics company, who have now entered the microcomputer software field

games that Thorn FMI are nrn. ducing for the Atari 400 and 800. There are also two proprams available for the Commodore VIC River Rescue and Vic

The Thorn EMI range will be widely available in the months leading up to Christmas.

costs £7 inclusive Also featured in this range of

games are versions of Defender

uckman, Centipede, and Missile

STARSCRAMBLE

controls of a Starfighter thundering through space at breakneck speed.

Your mission is to destroy four waves of attacking aliens which fly at you from right to left as you navigate your ship over rocky mountain terrain, through tunnels and caves.

The first attack wave is a barrage of ground to air missiles which fly straight up towards you from the planet's surface. If you cave where a storm of fireballs fly at you at great speed.

You cannot shoot these fireballs so the key to survival at this stage is to dodge The third stage features the

alien craft themselves, followed by swarming mutants. The final test is a test of flying skill as you navigate a narrow tunnel to complete the Omega Mission. After each mission you re-

ceive a bonus score and are then sent out on a new harder mission. The game features colour graphics and has sound effects. It also records the high score and name of player.

Omega Mission is based on

TOUCHDOWN AMONG THE ZOMBIES . . .

MOONLANDER Moonlander challenges you to

land your craft on the uncertain terrain of an inhospitable planet fully touching down - higher points being earned for landing on the narrow plateaux.

This version of Moonlander runs on a BBC Model B and is available from East-London plus £1 postage and packing

Another new BBC game from the same stable features a version of the well known computer game Zombies

In Zombie Island you are chased around your island by a nasty bunch of Zombies Your only escape is to make them fall into the numerous potholes that litter the island.

Row of Four is a computer version of the popular Connect Four game in which you have to ble and is one of a new range of games which are based on make a straight line of four counarcade favourites from Epsom ters before your opponent can. FIGHTING THE EVIL **7YLONS**

STAR RAIDERS

Star Raiders puts you at the controls of an Atari Federation Starship hurtling through space at twice the speed of light.

The view from the cocknit is of deenest space with asteroids and stars streaking past you, in this version of the popular Atari computer game.

Your mission is to destroy all Zylon warships on sight. Zylon fighters and cruisers can be destroyed by your photon torpedoes once they fly into your

screen mounted sights. But once you have shot down the defending star-fighters your mission becomes slightly more difficult

You must destroy the Zylon headquarters. This is called the Basestar - and is well protected from attacking forces.

The Basestar is a little more difficult to destroy as it is protected by shields forcing you to risk the lives of your crew in an attempt to fly in and attack at close range.

The Starship is equipped with a number of sophisticated flight and hattle information controls. The attack computer display shows you the position of the advancing enemy fleet.

The computer also keeps a running total of the number of Zylons downed - and those remaining.

Damage control informs you on the state of your own craft and the amount of energy you have left to carry on your attack on the enemy fleet. The attack computer controls

the sights - glowing red when a photon torpedo is trained accurately on an enemy target. The game features a number of difficulty levels and a sophisti-

cated scoring system which is based on the remaining energy when you have successfully destroved all the Zylon invaders. Star Raiders runs on an Atari VCS and will be in the shops from

button to escape. November at £29.95.

chrink

STOP THE

FACTOR, AMIDAR Atari owners can look forward to

three new titles in the new year from Parker Video Games - the manufacturers of Frogger and The Empire Strikes Back. Reactor trans you inside a

nuclear reactor. Your mission is to stop the core from expanding which, if it gets much larger, will explode - spelling doomsday for millions of people. You can only stop this by blasting the control rods with nuclear particles causing the ever expanding core to

Amidar is based on the popu lar arcade game of the same name. It is a simple task of collecting coconuts and painting lines. But watch out for the patrol quards - if you get boxed in you'll have to use your jump

Super Cobra is a graphically

per attack game in which you must destroy the enemy base. You fly through a maze bombing the fuel dumps. If you get beyond this stage then you will have to shoot it out with the UFOs that spiral towards

you - moving at great speed from left to right across the

The names will be in the shops from the end of January, priced

in space time.

MARCH OF THE DEADLY

Demons to Diamonds challenges you to shoot down an army of tron-like demons who are marching towards you in this latest shooting gallery simulation game for the Atari VCS.

One or two players can play the game at the same time using Atari paddles to control your gun Each player has to shoot only

at a certain colour demons. If you accidentally hit one of your opponent's demons the little chap turns into a skull and starts taking pot shots at you

When you hit one of your own demons it turns into a diamond and hounces from left to right across the screen advancing towards you before suddenly disappearing. Diamonds are worth extra bonus points if you can

If you manage to shoot down eight screens the shooting skulls will begin to appear at random. After the tenth screen they begin to move, becoming more difficult to hit and getting faster with each screen

Demons to Diamonds is due for release in October and will be one of the less expensive new games this Christmas at £18.95.

ARKS WITH A BITE

Chopper Command is the latest addition to the Activision range imported into this country by Computer Games Limited.

The game is well known in the States where the manufacturers took out whole pages in games magazines to advertise the cas-

The basic task is to defend a convoy of medical supplies as they journey through the desert. On your journey you are attacked by enemy jet fighters and guided missiles.

You have the aid of radar which represents the oncoming aircraft as a series of white dots on the horizon and you are a black dot. You must constantly keep an

eve on the radar so that you are well positioned to pick off the at those vital medical supplies.

Chopper Command has impressive graphics, the desert being represented as deep glow-

The chopper itself is a detailed simulation in yellow with the trucks black silhouettes.

Chopper Command runs on an Atair V.C.S. and will be in the shops at £24.95 in late October.

FIND THE ULTIMATE ANSWER . . .

Atari VCS.

Riddle of the Sphinx offers you a unique video games challenge. combining an adventure format puzzle with a reaction firing test.

If you discover the meaning of the riddle you could be the first person to do so. Although it has been released in the U.S. no-one has yet solved it.

On your journey you will have to do hattle with fierce trihesmen armed with spears and knives. These battles not only put you in mortal peril they also force you to use up your precious water. As your water runs out you slow down until - unless you find an pasis - you will die of

You move your desert traveller with the joystick, left and right as the scenery of the desert scrolls down past you.

RIDDLE OF THE SPHINX The aim of the game is to

collect as many diamonds and caskets of treasure as you pursue your apparently nomadic trail through the desert in the ultimate pursuit of the answer to the Riddle of the Sobiny You also encounter some good characters on your journey —

among them a beautiful maiden Can this be a clue to the Riddle of the Sphinx? The game is one of the Imagic range, distributed in the LIK by Adam Imports and will be in the shops before Christmas at £27.95. It runs on an

DICE CALL THE TUNE

BACKGAMMON, DRAUGHTS

Backgammon and Draughts are the two new titles offered in time for Christmas for the Voltmace Database TV games centre.

The Backgammon cassette features a number of games at different levels of difficulty. The first teaches you how to play the game in easy to understand

The dice are rolled automatically by the machine and change colour from blue to red to indicate which player's turn it is or to indicate that it is the computers turn if you are playing

The Draughts cassette also features several different ver-

You can play against a friend or take on the computer at one of three different skill levels For people who like to do things backwards the game will also allow you to play a reverse

version of draughts in which the idea of the game is to get rid of all your men before your opponent. Backgammon and Draughts

will be available at Database dealers from October at £19.95

I ING WITH DEADLY

NEW FROM INTELLIVISION

Mattel are about to attack the Christmas TV games centre marenemy aircraft before they can ket with a number of new repenetrate your defences and get leases for the Intellivision machine

The long awaited Tron games featured in Computer and Video Games last month Deadly Discs and Tron Maze-a-Tron are due in the shops in

In Deadly Discs you do battle with a variety of computer controlled adversaries - armed only with an electronic frisbee.

In Maze-A-Tron you have to penetrate the Master Control Program But heware the nasty monsters sent out to thwart you.

Mattel are also offering a choice of two free games when you purchase an Intellivision machine. You can have a copy of Lock 'n' Chase - Mattel's answer to Pacman or their soccer simulation game.

Dungeons and Dragons will be in the shops from November and is a version of the popular role playing fantasy game in which

you have to find your way around a maze of caverns and tunnels and win treasure.

Also new from Intellivision is card playing simulation on cassette. Royal Dealer offers a choice of four different games. You can choose to play against one, two, or three different computerised opponents. The game does not just display the different hands but actually shows you your opponents sitting around a table. The game also acts as a

score keeper. Intellivision cartridges can be obtained from your local Mattel dealer at between £19 and £24.

The new Dragon 32. So well designed, you'll even understand this ad.

If you're already a computer expert, may we refer you to the box of technical specifications displayed opposite.

If you're not, may we refer you to the new Dragon 32 Family Computer. A computer so easy to understand, you won't understand why all the others seem so difficult.

AndthenewDragon32costsunder£200.

32K RAM FOR UNDER £200?*

When you're comparing computers, the first hing you need to know's the size of the memory. In plain English, the Dragon has approximately 32 thousand units of Random Access Memory. (3DK RAM for those who prefer to be blinded by science.) This means that the Dragonis memory is at least twice as powerful as its competitors.

With a memory this powerful, the amount of information the Dragon can store is literally vast. But the Dragon doesn't just make it easy to store information. It makes it easy to use too.

USER-FRIENDLY?

You may have heard of the term userfriendly. Reverting to plain English once more, this means simply that the computer will go out of its way to understand you, rather than vice-versa.

The Dragon 32 is so userfriendly, it practically licks your hand. You tap (literally) its vast resources through a beautifully-designed keyboard that's as easy to use as a typewriter.

On this keyboard, you type in a language which is surprisingly close to the English you talk every day. The Dragon 32 will receive your order. Under-

your order. Understand it. Send it to the appropriate section of its massive brain. And then display the appropriate information on your screen. All before you can say 'gobbledy-

gook'

"IV not included in price

SPECIFICATIONS 6800F MICROPROCESSOR Pet Apple Atari 400 BBC Micro, and VIC 20 still have the less powerful 6502 FEATURE 32K RAM (as standard). At least twice the power of similarly priced machines. Expandable to 64K RAM. 16K 5K 16K Featuring: ADVANCED GRAPHICS (set, line, circle, paint, print, draw, rotate and print using). 26K 14K 3K USE WITH ANY U.H.F.TV and/or separate P.A.L. monitor MICROSOFT BASIC AS Typewriter feel. Guaranteed for 20 million depressions. NO

KEYBOARD

FIRE YOUR IMAGINATION.

Learning how to use the Dragon 32 won't cause you to experience any problems. Learning what you can use it for will cause you to experience something entirely different.

Delight. Surprise. Fascination. And challenge.

The Dragon offers a range of some of the most popular computer games in the world. From those celebrated space battles to mindboggling adventures in seemingly unfathomable dungeons and caves.

As if by magic, a simple typed message will command the Dragon to create your own drawings. Then it will colour and paint them

in 9 colours.

And it's clever enough to create virtually any image you want - circles and arcs as well as straight lines.

The Dragon will also play and compose music with you, with a range of 5 octaves. And it works with any UHF TV or PAL monitor.

LEARNING THROUGH PLAYING. All of this makes the Dragon the ideal

machine to build your children's interest in the world of computers as they become increasingly more vital. School-children already enjoy using computers.

The Dragon is the first computer specifically for the family - so by enjoying yourselves at home, you and your children can soon become expert enough to create your own programs.

BRILLIANTLY SIMPLE GUIDE.

The Dragon is living proof that you don't have to be an expert in computerspeak to be an expert in computers. It comes with the easiest-to-understand instruction manual ever written for a home computer.

Every step, every explanation, is made clear - even if you're a beginner. In minutes, it will show you how to write a simple program. Within hours, you'll be fascinated. And from then on, you'll continue to be astounded by the new world which the Dragon's power and versatility will open up to you.

See the new Dragon 32 in your High Street. At under £200, it's not just the first family computer. It also has all the features an expert could wish for.

Except perhaps the jargon.

DRAGON 32 The first family computer.

COMPUTER & VIDEO GAMES 23

was impatient, chanting and jeering, when suddenly there was hush: two tough, wiry figures strode into the arena, armed and ready for combat.

The tension broke, and wild cheers rang out - some for one, some for the other. Who will triumph in this deadly tussle of strength, wits and fortune? The Gladiator combat has becun

You may remember reading about computer-moderated playby-mail games in May's issue of Computer & Video Games. A new addition to this field is

Gladiator which is particularly close to our hearts, being not only British, but also entirely our own creation. I have set down here the background to the game, for those of you who are interested in play-by-mail (P.B.M.) games or who are thinking of creating one of your own.

One advantage of computer moderated games is that a large number of players can have their moves processed quickly and cheaply. It can also cater for complicated interaction between rival players without deluging them with extensive rules or requiring detailed analysis of a player's movements.

Lastly the computer acts as an unbiased and unmovable authority on the interpretation of the rules and how they are carried out. The biggest drawback is lack of flexibility as the programmer is unlikely to predict every possible developWhen we first developed Gla-

diator we tried to produce a game which made the most of the computer's strengths

Having established the need for the game, we looked for a suitable subject, one which readily lent itself to computerisation. Many ideas were considered before we decided on the excitement of combat in the ancient arena as the ideal choice. In the system we have developed for Gladiator there are a limited number of variables, all interacting to produce results - the prime requisite for a computermoderated game.

Gladiator meshes in very well with one of our existing games. The Tribes of Crane, so that players from there provide a basic nucleus for the game, giving a full number of gladiators eager for combat from the very start.

For a game set in the sword-tosword combat of the arena, we clearly needed a blow-by-blow description of the fight and of the moments when the telling strokes were made. To generate this, we would need to input a number of variables supplied by the player. and let the computer "play" with them according to a suitable program to generate the result. Variables such as these are an essential ingredient of any computer-moderated game.

In the arena we decided that

gories of variable: the ability of the gladiator; his tactics; and luck. We allocated these groupings to the three types of variable we wanted to input into the program.

First, there were variables which were constant for each individual gladiator in all of his flights: his experience, special skills, and so

Second, factors that varied for each gladiator, fight by fight choices of tactics, special weapons or special plans. Finally, there are variables generated by the computer itself - the inevitable random alament

As all of our other games are role-playing games, where the player assumes the persona of a tribal chief or planet ruler, we naturally felt that the character of the Gladiator should be important. The whole of a player's first turn is spent in creating his fighter.

The player has a number of points which he can allocate to the various attributes of the warrior. like strength, speed and intelli-

This choice is crucial as each attribute will have a different effect on each of the different kinds of stroke available to the gladiator in all his fights.

Tactics are devised by the player for each individual fight in which his gladiator participates. There are six basic strokes from which to choose, and the wise gladiator will concentrate on those where his natural abilities are most powerful.

The opponent's previous fights will be studied, in order to plan the best tactics against him. 30 consecutive strokes are chosen on the turn sheet, and these are processed in order by the computer, simultaneously with the strokes of the opponent.

The gladiator's basic details his main attributes and special abilities—are input when the gladiator is first set up, and stored on a floppy disc. Whenever a turn for that gladiator is processed, the tactics he has chosen are input and the attributes recalled from the disc.

These attributes are then used to modify the percentage chance of scoring a hit with the tactics chosen. This modification system is the core of the program. Craphs were drawn to show the shape of the effect which we wished each attribute to have as its strength (the points allocated to it by the player) varied; and then functions were devised to achieve the desired patterns.

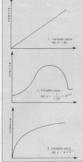

The gladiator's attributes are compared with those of his opponent to determine the chance of hitting on any particular stroke for each gladiator. This involves crossreferencing the two strokes with each other, as there is a matrix for the chances which different strokes have acainst one another.

Random numbers are then generated by the computer and compared to the modified base percentage chance of a hit to see if one has actually been achieved. This is the luck element.

If you decide to devise your own game, the functions and algorithms which are the core of any game program, should have considerable thought devoted to them.

The way in which you want each variable to affect the result is crucial. I have shown some examples of functions (above) but there are obviously many others, as well as other variations of these, which are not be devised to give an infinite range of effects. You may need to talk to a friendly mathematician to turn the graph or diagram into an algorithm the computer can use.

One last important consideration is the gradient or slope of these functions. These will determine precisely how much each change in value of the variable alters the effect it has on the result. These are crucial to play-balance and the only

way to achieve a good balance is through rigorous play-testing.

It may sound dry stuff but this is the crux of the game and the most exciting part of seeing your creation come to life is seeing how the algorithms respond to a set of circumstances and then tuning them to achieve believable results.

Don't make the mistake of choosing an all-powerful tactic which will win no matter what, players will quickly find it. Instead produce a matrix where the tactics entered by either side are compared and the results taken into account when finalising the outcome.

A simple matrix of the sort used in World Cup Manager (C&VG June) is also illustrated above.

To add to the personality and excitment of the game various wrinkles and tweaks should be added to the basic algorithms. In Gladiator, for example, the combatants may elect to begin with a spear cast before closing in or can fight to the death instead of just until first blood is drawn.

In the army chieftain type of

P.B.M. it is possible to account for such things as lowering morale following a defeat or a long route march.

In individual games like Gladiator exhaustion during a fight is catered for, as the combat draws on the fighters become more vulnerable

 This is a straight line function where the effect this variable on the result is directly proportion to the value of the variable. By inverting the gra (downward sloping line) you would achieve it

for the variable would have the most effect Devicesty you can think of your cown application of all these curves, but this one would lend use well to the application of lick in many games the ensumes having a marketing difference effect it may be even more appropriate here. 3. Diminishing marginal returns. With this function each amount added its the value of the variable has less effect than the previous one. A useful hanction in the allocation of scarce resources.

inverse 3. Here each increase in the value of the variable produces a greater effect than the previous one. Here you would be encouraging a greater divergence of values on variables, and more varied results.

This graph shows the mirror image of 4. Here each

more varied results.

This graph shows the mirror image of 4. Here each increase in the varieble produces reduction in its effect on the game, with each fall producing it lesser decrease than the previous one.

and less effective. Can they summon up those extra reserves of strength to deliver that crucial blow. Often disregarded by the

amateur who gets bogged down in computer code is the presentation of the game. Writing up games rules in an easy-to-follow, and imaginative way is part-and-parcel of producing a good game. If you are asking players to fit into a world of your making then you must bring that world to life for them.

Don't skimp over the rules you had to compromise your ideals on, every part of the game should be fitted into the context of the world and the rules and customs by which it works.

Mitre Wargames is based at Lothlorien. Stockdale. Heelands in Bucks.

A common myth — particularly among non-players — is that grand-masters look at every possible variation for many moves ahead. A little calculation reveals that this must be false.

must be taste. Suppose each side had 10 legal moves at every turn, then to look ahead three moves for each side would involve considering a million positions. A grandmaster may well moves for each side during the course of a game and cannot possibly process all the necessary positions in the time allowed.

In any case there is no evidence that they even attempt to do so.

There is a famous remark attributed to the grandmaster Reti. When asked how many moves he saw ahead, Reti is alleged to have replied: "only one move — the right one".

The Dutch psychologist Adriaan de Groot made a study of what factors determined chess skill in the 1830s and 1940s and published his findings in a classic work Thought and Choice in Chess. To do justice to this book would require many articles, but a few examples will give the flavour of the work.

In one experiment, de Groot showed a series of unfamiliar positions to chess players at all levels of skill from world championship level (Alekhine, Keres and Euwe were all included) to chub players

included) to club players.
Each player's task was to choose
a move and think out loud while

doing so.

De Groot recorded their verbal statements and used them to estimate how much searching each player carried out in finding a move. Figure 1 shows one of de Groot's positions, with White to play, You may like to try it yourself before reading on.

The results cast an interesting light on grandmaster skill particularly in relation to the nearest group of lesser players, designated as "experts".

There were five grandmasters tested and four of them chose the correct move in Figure 1. None of the five experts tested picked it. Why can't a computer think like a man? Even the best chess-playing machines searching huge trees of variations have still not reached master standard and only a few are good enough to trouble the strong amateur human player.

Might it not be better to approach the problem another way — how do grandmasters think?

All the grandmasters mentioned the correct move at some point in their analysis, but only 2 of the 5 "experts" did.

Measurements of time taken to make a decision, number of moves considered etc. did not convincingly differentiate the two groups, with one exception: the "value" they estimated for the chosen move where the grandmasters were much more accurate.

Revealing the average depth of search for both grandmaster and "expert" on Figure 1 was much less than some might have expected, a relatively humble seven ply — four moves for White and three for Black

The "millions" of variations supposedly explored had also shruoto to an average of 35 moves in total. It seems clear that the grandmasters were able to perceive some feature of Figure 1 which the experts could not, even though they were able to analyse just as well in every measurable way.

In case you have not yet found the correct move, it is BxN(O5)).

A second experiment reinforced and clarified the importance of perception in chess. This time de Groot again permitted his subjects to look at a position again permitted his subjects to look at a position from an unfamiliar game, but only for a few seconds.

The task was then to recall the position, for example by setting it up on an empty board.

The results of this experiment were intriguing, grandmasters and masters recalled approximately 93% of pieces correctly, experts recalled 72% and lower-level players recalled about 51%.

However, when the same experiment was repeated with randomised — possibly illegal — positions of pieces, the grandmasters' advantage vanished.

All the subjects performed equally badly, recalling only 3 or 4 pieces correctly

It is reasonable to deduce that on the former task (recalling "genuine" positions), the grandmasters were recalling not individual disjoint piece positions, but clusters of pieces or significant patterns.

To illustrate this, consider Figure 1 again — although it was not, in fact, one of the positions used in the second experiment.

A cursory inspection shows a King-side castled formation for both sides, Queen Rooks opposed on an open file, two knights on "Bishop 3", an isolated Queen Pawn on Q4 supporting a White Knight on K5 and blockaded by a Black Knight on O4.

There is a White Bishop on KN5 pinning the Knight on Black's KB3 which is defended by a Bishop on K2. Black has a fianchetroed Bishop pawn formation (KB2, KN3, KR2) although his King's Bishop is out of place.

These are all features which occur in innumerable positions, but would not be recognised by the

beginner — or the computer.

Where does all this leave us?

Grandmasters seem to analyse no better than experts, but recognise more features of a position which somehow prompt them to find good

How many features are there altogether? If we could identify them and put them into a program, would we have a "grandmaster program"? I will return to this topic next month.

37 million reasons why the Atari Home Computer is something to see. The display screen used with our computers is composed dots. Delivering colour and luminosity instructions to each dot for a second requires 3.7 million cycles...a lot of work for the normal 6502 processor.

That's why the Atari computer has equipped its 6502 with its own electronic assistant. It's called ANTIC, and it handles all the display work, leaving the 6502 free to handle the rest. What this means to you is uncompromisingly spectacular display canabilities without loss of computer power needed to carry out the demands of your

That's a quality you just don't find in ordinary home computers. And it's one of the reasons some computer experts say that Atari computers are so far ahead of their time.

There's more...which is what you'd expect from Atari Language. The Atari Home Computer uses several programming languages to give the user maximum control Microsoft BASIC and Atari BASIC are understood and spoken by the Atari computer. You'll also find our Assembler Editor cartridge indispensable for machine language programmine

Sound. An Atari computer has four sound generators, or voices, activated by a separate microchip. This leaves the principal microprocessor chips free to perform other tasks. And you can take full advantage of this capability which is designed for easy programming.

Change, Atari Home Computers have been designed to make change and expansion easy. The Atari computer has a modular operating system that can be easily replaced as new technology develops. If you need it, memory expansion requires no more than inserting additional RAM modules.* And the Atari ROM cartridge system also makes it easy to change languages. In short, your Atari computer won't become obsolete by future developments...because it already incorporates the future.

Sharing. To learn more about the amazing capabilities of Atari Home Computers, either visit your local dealer or fill in the coupon below.

THE GRAPHIC DIFFERENCE BETWEEN ATARI COMPLITERS AND ALL THE OTHERS.

Arcade games don't come any more forbidding than Robotron. To the uninitiated, the screen appears as a chaotic whirr of activity add the unfamiliar two joystick control and the odds

seem impossible. The game is the invention of former Williams' game designer Eugene Jarvis, who was responsible for Defender

Robotron sets you down in a screen full of rampaging robots with the task of saving the man, woman and child clones. These clones are the way to large scores, the first one you save is worth 1,000 points, the second 2,000 and so on up to 5,000. The early walls are deceptive-

ly easy and should be used to become acclimatised to the controls. The left joystick moves the player in eight directions, the right enables the player to fire in eight directions. Practise moving and firing diagonally.

Wave one introduces you to the Grunt, your first robotic foe. Grunts (100 points) are the cannon fodder in Robotron they wander around but cannot fire and you should ensure that the two clones on this screen are rescued before you destroy the last Grunt, Finishing off all the Grunts and the wave.

Wave two brings on the indestructible Hulks which can be halted by a hit but not killed. The

A BRAIN WAVE OF A GAME Soheroids (1,000 points) are the

main priority on this wave. They lay Enforcers (200 points) which look rather like fire hydrants and spray out fire at you. Stay out of the way of the Hulks, blast the Soheroids and Enforcers, then finish off the Grunts and scoop up the humanoid clones before

the Hulks kill them. The third and fourth (and sixth

and eighth) waves feature the

Ms Pacman, the first lady of the American arcades, is to make her debut in the U.K.

We featured this female of the these have an additional two carnivorous maze species in an article on the arcade industry's assault on women players. Most British distributors have

fought shy of introducing this lady to our shores, but now a "conversion" kit is out and don't be too surprised if the Pacman in your local pub or arcade develops curling eye-lashes and takes to wearing a bow.

Apart from these understandable additions to her appearance, Ms Pacman will also feature four mazes for the newcomer to try his hand at. Three of

tably more of them and they become more aggressive. Spheroids often start in corners and are vulnerable to the player who has mastered diagonal fire from the centre of the screen.

Wave five is known as the Brainwave The Brains are par-

First priority is to eliminate the single Spheroid and then blast the Brains quickly for 500 points each. Cruise missiles can be run

same foes but there are inevi-

ticularly dangerous as they can turn your clones against you and fire deadly cruise missiles which

from when there is more than one of them. They will chase you but soon fall into an easily blastable line behind you, turn and

When Brains find a clone they jump them up and down and turn them into deadly Progs. These are then fired at you and you have to react quickly to escape. Wave seven introduces the Tanks (300 noints) These start life as blue spirals. Quarks, which sit passively on the screen. Don't be misled, these should be blasted as quickly as possible. You won't get all the Quarks but try to single out those which are developing for quick attention Fully formed Tanks will fire cannonballs at you, which can rebound off walls to get you Wave nine is given over to

Grunts blast your way quickly through to a wall and then tackle Brains reappear on the 10th

15th and 20th wave and wave 22 brings in a deadly combination of Tanks and Enforcers and after wave 40 it starts up all over It is possible to blast your way

out of very tight corners by using the old Asteroids technique of moving and firing towards the enemy. Don't let the corner-loving Enforcers trap you in one and keep the Hulks away from your

main source of points the clones Different operators set difforent honus life levels so shop every 12,000 to learn on

RCADE MISS IS A MS PACMAN

side exits.

Dots still score 10 points each with energizers adding 50 to the total. As with the usual Pacman. Ms Pacman munches 200 points on the first ghost, 400 for the second and so on.

When she is caught, Ms Pacman dramatically swoons and falls ... and the cliches don't quite stop there, the between screen displays feature Pacman

chases the new Ms across the screen, then she chases him and finally the delivery of the Pacbaby.

The ghosts are still as you remember them, except that one of these has now undergone a sex-change operation and is affectionately known as Sue.

THE LOST ARC OF THE COSMOS

The search for cosmic treasures takes place in Space Dungeon, a new game which is being tried out at a few locations in Britain. Snace Dungeon uses the Robotron design: a two iovstick control for moving around the

screen and eight-way fire. You play the part of a raider who can penetrate the cosmos to discover its richas A radar screen helps to plan your tactics and manneuvres as you try to

evade the quards and other

Can you become a pinball Mastermind? That's the challenge issued by the latest machine from Bally - called Spectrum.

You have to crack the colour code set up by the pin's built-in computer brain while you play. You must hit targets to light up coloured lights in the correct order. If you crack the table's code - it can choose from 256 combinations - you win a big honus. If you manage to get your hall into one of the three kick-out holes featured on the playfield the machine will give you a clue closes again. - indicating which target lights you should aim for.

A novel feature of this particular pin is that the ball is fired onto the playfield using the right-hand

flipper button It's a table that will keep you

quessing. Also new from the Bally stable this month is Speakeasy - a return to good old fashioned pinhall concepts. It has a card game theme - traditional in pinball and includes Add-a-Ball and Subtract-a-Ball features. It also has a roulette wheel on the playfield which spins each time you lose a ball, giving bonuses.

SPACE DUNGEON

follow the arrows to the Bonus

Points for collected treasure are scored only after a level of the dungeon is completely explored Each level of a nossible 99 has 16 treasures and 36 rooms. The deeper the dungeon. the player strikes, the more valuable the treasure but the greater the danger

The main rival for the treasurps is the Thief who will steal away your bounty. A direct hit will make him drop it Watch out

OUTLINE **OUT OF LINE** Try to outwit the Outline

machine. You can never win but you can achieve a good draw. Outline is a chase game on a series of changing grids. You control a drawing marker which runs along the lines of the grid. responding to a simple joystick control. Behind you comes the chaser leasing his own marking across the grid pattern.

You can keep him at a distance by employing a gap button to prevent him catching you. Like Amidar the screen colours-in every square successfully surrounded by your lines.

When the chaser is left hehind a gap he must retrace his tracks and find another route to get to your marker or wait until the gap

If he doesn't catch you and the screen is filled in, you can progress to a new grid pattern. You can start at different levels of difficulty and it is nossible to have more than one chaser after

In the later stages you will find the machine talking to you and the chasers are equipped with missiles to fire after you.

One trap a lot of beginners fall into is, being cut off at a corner between two of their own gap barriers. A mistakenly pushed gap button leaves you helpless while the chaser waits patiently for the gap barrier to clear.

on this will result in a frenzy of lets you enter the game at a level deadly Spores attacking you

If you lose a life, your treasure is shown on the radar screen and can be returned to later.

The treasures are: iron crosses, copper pieces, silver stars. a nolden fleece and a platinum ark Among the dangers are an Executioner the Enforcer Death Squares, Guards, Piker Shins and a mysterious creature called a Corner Zapper

Like Tempest, Space Dungeon suited to your skills, you can inflict untold damage on the easy levels or go for a more dangerous level with the increased rewards it brings - but, of course.

The graphics in the game are not realistic but have a symbolic design and the signs are that Space Dungeon is proving popular enough for more widespread distribution soon

RECORD BREAKERS A whole host of new machines was not included is that some

are making an appearance on players can now continue play-Record Breakers for the first ing for as long as the arcades

We have also received a good deal of correspondence about an older machine, Defender from people who regularly score over a million. The reason Defender

remain open

The Battle Zone and Missile Command games are also going this way and I am closing the file on there

RUNS ON A T.I. 99/4 OR 99/4A

Space Laser is Invaders with a difference. You are the attacker, con-trolling a laser firing base at the top of the screen while aliens come at you from their planet below. You are moving gradually down

toward the planet's surface and

toward the planet's surface and have to blast the aliens as they move to defend their home. You move your base using the cur-sor keys to intercept the aliens who move if a zig-zag pattern across the screen. The space key fires your

Once you hit the planet - unless you've used all your three lives you get more fuel and another ce to zap the aliens. There is a bonus game feature built in and your score is shown continuously.

Can you tell the difference between a Lolly-Gobble-Choc-Bomb and a Face-Freezin' Fruit Fantasy? You can! Well this is the game for you. But you'll have to be a

real cool customer to become a top ice-cream vendor at Microville-bythe Sea. Up to four players can take part in this buying and selling

Each player runs a van selling ices and lollies at our favourite seaside resort. You are in charge for just seven days and each morning you must buy up stock - keeping

a careful eye on the weather forecast as the number of customers you get will obviously vary according to the variable sunshine factor — and if it's a weekday or

weekend. So check out your chimes and start praying for a heatwave! The program will work for both Apple II and Pet, the only difference in the listing being line

700 which is a subroutine for clearing the screen. To be absolutely foolproof the Pet programmer would need to ensure that pressing READY by mistake would not break the run.

A NEW BRITISH MADE COMPUTER

This is a powerful new microcomputer specially designed for the family and small business use. It has 32K Bytes of RAM (expandable to 64K). 18K Byte MICROSOFT COLOUR BASIC. High res. colour graphic and very good sound features. It has full size professional keyboard and reatures. If has full size professional keypolard and comes complete with power supply and a built-in centronic parallel printer interface. It has a cassette interface and a slot for games cartridges. A floppy disk interface and DOS will be available shortly. Manufacturers 1 year warranty on

BUNS ON A VIC-20 IN 3-5K

Well guv, there we were sitting in the old jam jar when everything went reels of cotton. The blag was going well and the boys was just about to leg it when the Old Bill turns up. Not yer ordinary rozzers though. These geezers fort they was angels. Swooping out of the sky in a bloomin' helicenter! It was enough to give you a real turn. The boys was throwing the swag in the back of the motor and I gave it some wellie and steamed off and that's when I ran into you guv. . . ."

This is a game of skill and chance. You are a bank robber and your gang is throwing their ill gotten gains down at the getaway car. You have

to move the van to catch the swag.

Meanwhile a police helicopter is homing in on the scene of the robbery. You can delay it by guessing the correct code letter - if you are wrong it's at least 20 years in the slammer for you and your mates!

You get three lives before those jailhouse doors slam shut on you. The money bags are worth between 10 and 100 points - but if you miss one you lose 20 points. The program includes REM statements for explanation only and should NOT be typed into your computer - otherwise the listing will exceed 3.5K.

But be sure to turn to page 43 before you start keying in this program. You'll find an important message which will help avoid any problems. And when you get around to playing this game you'll find you will have enough problems to deal with.

Top score at present is 4760. Can you beat it?

BY HOWARD EVANS

Jupiter:

Jupite

oni £89.9

The Jupiter Ace uses FORTH

The Jupiter Ace personal computer runs in FORTH, an easily understood language, typically four times as compact and ten times as fast as BASIC. Before the Ace all personal computers used BASIC and FORTH was only available to a privileged few. The Jupiter Ace also features a full-size moving-key keyboard. high-resolution graphics, sound, floating point arithmetic, a fast and reliable cassette interface and 3K of RAM.

Available soon

Plug-on parallel printer interface.

For around £20.00 this will connect your Jupiter Ace to anything from high-speed dot matrix to letter-quality daisy wheel printers.

Plug-on 16K Memory Expansion

For around £30.00 you will increase the memory of your Jupiter Ace to 19K giving you instant access to enormous amounts of

information. Software

A catalogue will be sent with every machines, and includes, initially, programs for education and entertainment

411 inclusive

NOTE, A YOR A 'M' IS POUND SIGN ON THE VICE THIS IS BECAUSE THIS PROGRAM WAS LISTED ON A PET PRINTER

lon

An exciting new Commodore peripheral

Own or use a Pet or a Vic? Fed up with being ignored by all the traditional monthly magazines?

Fed up with listings, which are too simple or simply do not work? You need Commodore Computing, the new

monthly magazine. Commodore Computing is published by Nick Hampshire, author of The Pet Revealed, Pet Graphics, A Library of Subroutines and The Vic Revealed.

Each issue is packed with advanced

advice on how to make the most of your computer, whether you use a Pet or a Vic.

Each issue covers a host of applications - software, hardware, machine code, games, business use - whatever it is you'll find it in

Commodore Computing. If you want to learn more about your computer, take out a subscription to Commodore Computing

That's the only way to get it, and get it straight.

Send £12.50 for 1 year's subscription (10 issues) to:

Commodore Computing, Magsub, Oakfield House, Perrymount Road, Haywards Heath, Sussex RH16 3DH

It's the 21st Century and man can travel all over the galaxy, has learnt the secret of virtual immortality and how to use an electro-static toothbrush in a weightless environment.

But things haven't changed that much, there's still a fuel crisis going on ... and the present state of the interstellar recession . . . well, who knows where you'll stand one millennia to the next?

The Klingons have put up the price of uranium rods again and here you are stranded on planet with a great stack of the fuel which the known galaxy is crying out for and no easy way to get it on board your ship.

The problem lies in the dreaded anti-matter rods which are mixed in with the uranium, a false move and you could see the whole lot disappear into limbo. If you could just master these paddle controls

The instructions are included with this simulated computer reconstruction of the dilemma. Good loading.

CHRISTMAS ONCE AYEAR. GAMES ONCE IN A

video game cartridges for use with the Atari® Video Computer System® *

STARMASTER

You are cruising through an empty part of the galaxy, but squadrons of enemy starfighters are threatening your four friendly starbases. You call up your Galactic Chart and plot a course to intercept. Warping through hyperspace en route you avoid deadly showers of meteorites. Now your gunsight is flashing and the enemy is near. You destroy them with your laser cannon but your computer read-out tells you that their fire has destroyed your shields and drained your energy

Again you call up the Galactic Chart and plot a course to your starbase. You dock, and your damage is repaired, your energy banks replenished. Back you go to re-engage the enemy.

Now you have some idea of the astonishing realism and excitement of this Space Odyssey.

A convoy of trucks is ferrying vital medical supplies through the arid desert. You are flying escort in your helicopter gunship.

Suddenly a flight of enemy machines shows up on your long range scanner and you head in to attack with your laser cannon. They reply with deadly multi-warhead missiles. You start with two choppers in reserve, and add another for each 10,000 points scored, up to a maximum of six.

S COMES BUT S AS GREAT AS THESE A LIFETIME.

enemy, for the more you shoot down, the faster they get. So even though your choppe is really manoeuvable (a touch on the Joystick sends it into an instantaneous 180° turn) you'll find the opposing heliophers and jets very difficult to defeat. It's by no means easy, It requires lots of strategy and lightning reflexes and that's why Chopper Command is destined to become one of the all-time video game dassics.

STARMASTER® and COPPER COMMAND®, just two of the great ACTIVISION® range of video game cartridges for use with the Atar® Video Computer System®. Each and every ACTIVISION® cartridge features an outstanding game concept and the quality of the graphics just has to be seen to be believed. So get along to your local video game stockist and see the range demonstrated.

It is the year 2017. You are the sole survivor of a scientific research mission which came to grief on the recently discovered planet Xirec. Your ship crashed on one of Xirec's many small moons en route to the Andromeda re-

search colony.
You were left behind to
guard the ship when your
nine fellow astronauts decided to go down to the surface of the planet. They did
not return. You discovered
that the moon was inhabited
by creatures called Gnoots
who at first seemed friendly
— but later caught you and
transformed you into a monster.

Your only hope is the antedote. This will reverse the transformation and give you a chance to complete repairs to your ship and escape the infested moon.

The only problem is that the author is contained in the Goods themselves. You have to eat an anny as you can before you will return the human shape. Consuming the Goods of the Control of

above types of Gnoor.
The best Gnoofs to eat are
the Xymers, but they are hard
to find, the Megonaires are
plentiful but will not speed

your transformation a great deal. If you devour more than three Tyrolites — it's goodbye cruel universe. Imposaios are tricky creatures one minute they can look like harmless Megonaires, then they'll suddenly become a poisonous Tyrolite.

Megonaires score one point toward your transformation, Xymers are worth 10. When you reach a multiple of 100 you'll feel better and get a bonus. Instead of using a knife and fork to eat the Gnoofs the controls are T for up and '?' for down.

And remember — don't forget the indigestion tablets!

THE NEW COMMODORE 64

The incredible new computer from Commodore comes with 64K RAM fitted! Plus 16 colours hi-res graphics 320 x 200 pixels 40 columns by 25 lines Z80 micro processor can be added - that means you can run CP/M software, 8 independently movable Sprites with collision detection, and a sound generator with 3 voices, 4 waveforms, envelope and filter to rival some dedicated music synthesisers. And all this at the most incredible price ever. (AF56L) Only £339.00

DRAGON 32

The amazing new British computer with a full-travel standard keyboard, a 16-bit microprocessor, 32K RAM fitted (expandable to 64K and later to 256KII), 9 colours, hi-res graphics and Microsoft extended colour BASIC (the very best BASIC to learn with). It can be used with virtually any ordinary cassette recorder, it has a printer interface (Centronics-type), joysticks are available and it's incredible value for money. (AF57M) Only £199.50

THE AMAZING ATARI COMPUTERS

Atari 400 with 16K RAM (AF36P) £249 9E Atari 400 with 48K RAM (AF37S) £319.00 Atari 800 with 16K RAM (AF02C) £499.00

Maplin Electronic Supplies Ltd., P.O. Box 3, Rayleig Essex. Tel: Southend (0702) 552911/554155.

159-161 King St., Hammersmith W6, Tel: 01-748 0926 284 London Road, Westcliff-on-Sea, Essex, Tel: (0702) 554000 Lynton Square, Perry Barr, Birmingham: Tel: (021) 356 7292.

Ribbit! Ribbit! Hi there. I'm Hopalong Green, your guide on this tour through the swamps and pools of Frogville. I'm here to show you how my little green buddies survive in this fast moving world of ours.

As you may know many of us frogs have to commi between our homes in the soggy swamplands and the feeding grounds. Unfortunately there's a fast flowing river and a two lane highway in between. This makes commuting considerably more difficult than just catching the 8.10 to Paddington.

With a hop, skip and a jump the merry band of webbed wonders brave the dangers of road and river. They have to go it alone when crossing the road, but there are friendly turtles in the river who will lend a hand — or more correctly a shell — to see the from safely on their way.

They also hitch a lift on useful barrels which float down river from the local brewery. Many a frog has arrived home late with a lopsided hop and a silly grin on its face after staying too long on a barrel.

Now you too can experience the daily frog-rush. Simply plug in your Spectrum and program in this listing

lust like the real thing the rush is split into two halves. First you must cross the road - which has four lanes of fast moving traffic, then comes the river and the turtles. The frogs simply have to get to the safety of the riverbank. To start with it's fairly easy — but it gets harder as the rush progresses. By the way, there are 17 difficulty levels, and the frogs are moved by using the Z key for left, X for right, M for up and N for down.

You get three lives for each rush hour and there are 17 difficulty levels.

OK, frog lovers, now it's all up to you. Hop to it! The main variables are: TS Top score

Your score Number of frogs left R Stores car or turtle/barrel positions AS(4.64)

How to make the best home computer in the world even better.

Peripherals to turn a powerful computer into a super-computer for the professional.

With VIC. you have the finest home computer money can buy. And the more you use it, the more you will ask it to do.

Pretty soon, you'll want to extend VIC's vast notential to the full; and there is a wide range of VIC peripherals to help you do it.

Disk drives, disk-based software, a printer, cassette unit, joysticks, paddles-with these, VIC computing becomes total computing: giving you true professional power and capability.

We describe the major units here.

VIC PRINTER

like all VIC peripherals, offers a very high specification at a very competitive price.

It will print programs, letters, business data, graphic displays and so on.

Its main features include: 80 characters per line . Tractor feed dot matrix . 30 characters per second print speed . Full alphanumerics and graphic printing . Double-size character capability . All cables and leads.

VIC FLOPPY DISK UNIT

The VIC single-drive Disk Unit provides a fast, accurate and efficient means of storing and retrieving data and programs.

Together with the Printer, it transforms the VIC 20 into the ideal system for the small businessman or serious computer programmer.

Features include: 174,848 bytes capacity • Uses soft-sectored standard 51/4" single density floppy disks . Direct

interface to VIC . Direct compatibility

with Printer Intelligent system independent of VIC

(VIC RAM not required to run itl.

EXPANSION MEMORY CARTRIDGES

Special plug-in cartridges are available to expand VIC's memory. 3K, 8K and 16K RAM packs plug directly into the computer.

A Memory Expansion Board is also available to develop VIC's capabilities to the maximum.

For full details of VIC 20, its peripherals and software and a list of your local dealers, contact: The Commodore Information Centre, 675 Ajax Avenue, Slough, Berkshire, SL14BG, Tel: Slough (0753) 79292

The best home computer in the world.

4-A-SIDE

You thrilled to our World Cup Manager program! Now get in trim for the new season with this version of four-a-side soccer featuring the Sinclair All Stars!

The teams are represented on screen by star and inverse star graphic characters.

Fach team has a goalkeeper and a back, midfield and forward The goalkeener's movements are restricted to the goalmouth but each of the other men operates in a zone which covers one third of the pitch. At the beginning of the game

the men are positioned randomly in their respective zones. The men in the central zone race to the hall at the centre of the pitch. The first man to the ball has control. A display on line 21 at the bottom of the screen will be in normal print or inverse print depending on who has con-

trol of the ball.

Let Commodore expand your horizons.

VIC 20 is the finest home computer that money can buy.

And the better you get to know it the more confident, adventurous and ambitious you'll become.

You'll want to take advantage of the vast range of VIC software: a superb and constantly-growing selection of programs, embracing business systems, entertainment, education and many applications in the home.

Every program in the series has been designed by experts, and chosen for its quality and value

for money.

VIC business software covers a wide range of applications, including spread-sheet analysis, stock control, information handling and word-processing.

A mind-blowing range of games including Scott Adams' world-famous 'Adventure' series.

Advanced space games, including the sophisticated 'Omega Race'.

Learn subjects as diverse as English Language, programming, and biology.

And 'home' software ranges from IO tests to Robert Carrier menus.

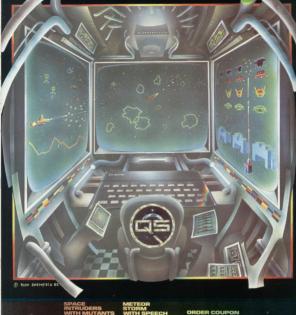

In addition, there is a range of VIC software, like programmers' aids and graphics packages-

to add to your understanding and enjoyment of computers and computing.

There's even a special 'VicSoft' Club for VIC 20 enthusiasts, with many advantages including special offers to club members.

REVERSI

MIRROR ON MEMORY

I have indicated the basic strategies for playing the game of Reversi, also known as Othello. There are three basic "Relies of Thumb"; (1) Aim to capture the corners, while avoiding playing near the corners avoiding playing near the corners chance, (2) Capture as few pieces as possible early on, as it ironically weakens your position to capture to many (3) Avoid taking sides unless you are running out of potons, as they are a liability

at the end.

These three 'thumbs' can be carefully balanced to form an effective algorithm for playing Othello. Obvious exceptions can also be added, such as take maximum pieces near the end. But no general "thumb package" can always find the best play, without a detailed list of exceptions — to mirror the way a skilled human

selects moves by experience. The ideal would be a massive memory bank of all possible positions, to tell a computer the best move in each case. You would need to use the whole planet earth as a store for that massive job, and hickers won't always find the answer

Human beings manage with their limited memory by being very selective in what they learn. We can do the same with a computer, because the symmetry of the board combines nicely with the fact that

BY JOHN BALL

It is surprising how we all assum certain abilities in human beings for example, I covered many im portant side positions in my boo Key To Othello with the assumptio that my readers had the ability spot mirror images elsewhere the board in real games. Computers do not have this in-built pate term recognition, so have to be taught.

most vital plays are on the side two rows of the board.

If we work out all the positions for

In we work out an use possible so to one side, that our Thumbe have missed, we can then describe a mirror image for that same side to cover positions that are the same but the other way round. The same patterns can then be repeated for the other three sides. This provides a memory hall of eight mirrors for the commuter to reflect on.

To save memory space, a system of labels for just one "set" can be re-used eight times for the mirrors, by suitable computer loops. Then any additional positions you discover need only be written-in

once in the mirror section.

How does this mirror system work? Basically, you are putting special attractive values to a square if the position around it fits a certain

if the position around it fits a certain shape.

For example in figure 1, there is a hole in a side at "A". If as Black, you don't play there, your opponent will,

gaining an option as well as a solid side.

Othello is all about fighting for options — choices of moves — so such spots should be pounced on. Simply tell the computer in the mirror section that if b, c, and d are occupied, then play at A, or at least make A highly attractive.

A more complicated item is shown in figure 2. Your opponent has played a terrible move — near a corner. To exploit this fully you must play first at F, then at G, then at H, all the time watching out for any replies that should evoke a different response.

The end result should be a captured corner, and an easily won game. So put lots of ifs and buts in the memory mirror, to make sure that the computer plays in the correct sequence.

Watch out for cracks in the mirror. In figure 3, playing as Black at I is obviously essential to save the corner at J. So you describe the five pieces in between, and say that I is massively attractive.

But what if white had a piece at J? Then it becomes essential to avoid I, as it would give away the whole side and next corner. So make sure that you specify all the relvant

Once you have a mirror system established, every time you discover a weakness in the computer's play you simply add another line to the mirror memory, saying "stop playing that rubbish move in that position, play this instead".

It should remember more consistently than you — so watch

PATTERNS AND PROGRAMS

Constructing patterns is a good way to illustrate how to build programs. lust as a complicated pattern can be developed using simpler sub-patterns, so a complex program can be developed from simpler sub-pro-

In dealing with graphics programming there is direct correspondence between the way in which a pattern is built up and the way the program to draw it is conetnicted

For this reason a pattern can actually be seen as a picture representing the structure of the program

that drew it. Making patterns with a micro is also a fascinating way to use it and to show off its graphics capabilities. Random patterns can be generated quite easily, and introductory manuals for many micros contain such programs.

Patterns generated in a systematic and non-random way can also be attractive and interesting. Whether or not patterns have a random element they can be informative, arissuch things as the growth of living organisms and the development of economic systems.

The first requirement in displaying a pattern is to describe it to the computer, and this requires the use of a computer language.

It is possible to describe patterns using Basic and the plotting commands it possesses, but other lanquages can be more suitable.

For example, a square can be plotted using Basic with the following instructions (or with something very similar involving PLOT).

10 MOVE 0.0

20 DRAW 0. 10 : DRAW 10,10 30 DRAW 10 0 - DRAW 0. 0

In LOGO (or using 'Turtle' graphics) a square is produced by: REPEAT 4(FORWARD 10 TURN 90)

You may agree the Logo description is more natural, giving as it does a direct set of instructions for the following a square which you could actually follow yourself. whereas the Basic description requires a knowledge of where the points such as (10.10) have, perhaps

arbitrarily, been placed. In any event, if you consider how to generate Figure 1 in Basic using a

subroutine for drawing a square as the fundamental building block you may decide that it is none too easy. whereas in Logo it is quite simple. To build the pattern in Figure 1

from a square, we need a sub-program to draw a square, and in Logo this can be defined by: TO SOUARE

REPEAT 4 (FORWARD 10 RIGHT 90) END

Using this program, Figure 1 is generated by

REPEAT 6 (FORWARD 3 RIGHT 60 In addition to its simplicity, the construction of this program exactly

reveals that of the pattern. The Logo program uses its subprogram in exactly the same way as a Basic program can use a subroutine. However, Logo can also support recursion, so that sub-programs can call themselves, whereas most micro Basics do not. (Atom

Basic and BBC Basic are notable

exceptions.) The pattern of Figure 2 can be constructed using recursion. The rule for making the pattern is: Take a large triangle, and at each end of its corners construct a new triangle with half its height, then do the same for each of the new triangles and so on until the triangles become so small that we can halt.

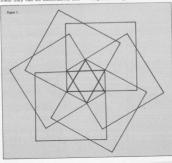

The process has been carried

three times in the figure. The pattern was produced by de-

fining TRIFILL as TO TRIFILL : SIDE IF : SIDE 5 THEN RETURN

REPEAT 3 ((TREFILL(: SIDE/2) FOR-WARD : SIDE RIGHT 120))

END and then executing TRIFILL 24

SPECTRUM SOFTWARE WANTED

Recorded on quality cassettes, sent by first class post, from: Michael Orwin, 26 Brownlow Rd., Willesden, London NW10 9QL (mail order only please)

Sinclair ZX Spectro

16K or 48K RAM... full-size movingkey keyboard... colour and sound... high-resolution graphics...

From only £125!

First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZXP irinter. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. Highresolution graphics. And a low price that's unrivalled.

Professional powerpersonal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically

increases your computing power.
You have access to a range of 8
colours for foreground, background and
border, together with a sound generator
and high-resolution graphics.

You have the facility to support separate data files. You have a choice of storage capa-

cities (governed by the amount of RAM). 16K of RAM (which you can uprate later to 48K of RAM) or a massive 48K of RAM Yet the price of the Spectrum 16K is an amazing £125! Even the popular

48K version costs only £175!

You may decide to begin with the
16K version. If so, you can still return it later
for an upgrade. The cost? Around £60.

Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

and I've (colour or black sand write): when Employing Sincials RAS(C) is Employing Sincials RAS(C) is the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience), you'll work of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer – available now – is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232 / network interface board.

Key features of the Sinclair ZX Spectrum

- Full colour 8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound BEEP command with variable pitch and duration.
- Massive RAM-16K or 48K.
- Full-size moving-key keyboard all keys at normal typewriter pitch, with repeat facility on each key.
 High-resolution – 256 dots
- High-resolution 256 dots horizontally x 192 vertically, each individually addressable for true highresolution graphics.
- ASCII character set with upper- and lower-case characters.
- Teletext-compatible user software can generate 40 characters per line

or other settings

- High speed LOAD & SAVE 16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair 16K extended BASIC incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

rum

The ZX Printeravailable now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set – including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper (65ft long and 4in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

The ZX Microdrive – coming soon

The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing. Each Microdrive is capable of holding up to 100K bytes using a single inter-

changeable microfloppy.

The transfer rate is 16K bytes per second, with average access time of 3.5 seconds. And you'll be able to connect up to 8 ZX Microdrives to your ZX Spectrum.

All the BASIC commands required for the Microdrives are included on the Spectrum.

A remarkable breakthrough at a remarkable price. The Microdrives are available later this year, for around £50.

How to order your ZX Spectrum

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day. BY FREEPOST – use the no-stamp needed coupon below. You can pay by cheque, postal order, Barclaycard, Access or Trustcard.

EITHER WAY-please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt—and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GUI5 3BR. Order Code Item Price Total Qtv Sinclair ZX Spectrum - 16K RAM version Sinclair ZX Spectrum - 48K RAM version Sinclair ZX Printer 59.95 11.95 Printer paper (pack of 5 rolls) 2.95 Postage and packing: orders under £100 28 orders over £100 29 4 95 Total £ Please tick if you require a VAT receipt *I enclose a cheque/postal order payable to Sinclair Research Ltd for £. *Please charge to my Access/Barclaycard/Trustcard account no. *Please delete/complete as applicable Signature PLEASE PRINT Name: Mr/Mrs/Miss FREEPOST-no stamp needed. Prices apply to UK only. Export prices on application.

RS232/network interface board This interface, available later this

rns interface, available later this year, will enable you to connect your ZX Spectrum to a whole host of printers, terminals and other computers.

The potential is enormous. And the astonishingly low price of only £20 is possible only because the operating systems are already designed into the ROM.

PUZZLER IN CHIEF

Welcome to the first Computer & Video Games puzzle page which will appear every other issue with a selection of simple brain teasers and harder brain manglers. These may have you reaching for the trusty computer to help you through some laborious number-crunching.

On some occasions, (the Mastermind puzzle) you will be invited to send in your

answer to try to win a prize. Others we expect to be solved quickly.

The resident puzzle master will be Trevor Truran, and we invited him to write a small biography to explain his credentials.

He did! It started: "Age: In three year's time my father's age will be double what my age was two years ago ..." And then Trevor's natural modesty took over, so we thought we'd better take a hand.

Trevor is a former puzzles editor of Games & Puzzles magazine, he now edits Too Puzzles.

If you have any ideas for computer puzzles yourself, please send them in to us and we will pass them on to Trevor, he pays £5 for each one published.

and we will pass them on to Trevor, he pays \$5 for each one published.

Apart from the Mastermind competition, all other puzzle solutions are printed
on page 11.

SWORDS OR WORDS

The answer to each clue is a sixletter word and sometimes that word is to be entered clockwise in the cells of the hexagon — starting in the numbered cell

On other occasions, though, the word to be entered is an anagram of the clue word! (Entered in just the same way).

To help you decide which to use when, the answers have been so arranged that touching cells of neighbouring hexagons will both have the same letter.

One pair has been filled in to give

MASTERMIND COMPETITION

No, don't panic! We are not going to strap you into an overgrown black leather chair and grill you for two minutes on Pre-Dynastic Etruscan Pottery.

Pottery.

All you have to do is crack the codes hidden in these examples of Invicta's classic peg puzzle.

invicta's classic peg puzze. Each picture shows you the position in a computer generated game just before the hidden line is correctly formed. There are six colours to choose from and they may be repeated — though there will be no blanks in the code.

Each attempt has been scored at the side — a black marker indicates that a peg is the correct colour in the right hole; a white marker shows that a correct colour peg is in the wrong hole. A blank shows that a peg is not the right colour.

For example: if the hidden code

was: red, blue, blue, white. And you tried: red, white, black, blue, the line would show a marker for the

red and two white markers representing white and blue.

senting white and bite. When you have used the clues given in each picture, write your answers to the codes on a piece of paper (make sure each answer so correctly labelled A. B. C.) of the correctly labelled A. B. C. of the c

The first three all-correct entries drawn from the postbag will each receive an Electronic Master Mind game, donated by Invicta Plastics.

This competition is not open to any employee of East Midlands Allied Press or of Invicta Plastics or their families. The judge's decision, as usual, is final.

you a start. Can you solve the clues, find the words, re-arrange where necessary and put it all together?

CLUES:

- 1. Seat of royalty.
- Rounded.
 Domestic fowl.
- 4. Short time.
- Lethargy.
 Accompany a car?
- 7. Firearm.
- B. Persian governor.
- 9. Relative.
- 10. A liaison.
- At large.
 Another relative!

ALL BOXED UP

rightly, a much harder process that it used to be. For a start you have to be in long trousers and not speak in a piping treble. And, if you visit the newsagent run by Chas Hands, you would need the mental agility of man seen in a night club from distance — by his will club

man seen in a night club from a distance — by his wife. As Chas cheerfully explains: "I sell two boxes of fireworks, each containing 41 items. The first has a mixture of Rockets, Silver Serpents and Thunder-Claps and costs exactly 55

"In the second there are as many Rockets as there are Thunder-Claps in the lirst. And likewise as many Thunder-Claps as Rockets. Both have the same quantily of Silves Serpents. The second one — Just a little over \$12.
"Oh, by the way, five Rockets

here would cost you the same as 17 Silver Serpents if you could buy them separately — which you can't! How many fireworks of each type are there in the first box and wha

COMING AND

GOING

Constable Paynting heaved a long sigh and reached resignedly for his notebook.

It was just his huck to be on duty the town roundabout when stolen goods were on the move. An informer had called the station and an inspector had called him a vehicle worth investigating had, sometime that afternoon taken the Lead Lane turning. What, he was asked, did he know about that? Not a lot, it seemed. The traffic

Not a lot, it seemed. The traffic had been heavy, the sun bright and hot. As he struggled to recall the recent past, he made notes of the vehicles and locals he knew well who had been in the area.

1. Mr Turner. who did not drive a

- Rolls, exited down the road immediately to the left of the one he entered along.

 2. It was a woman who met the
- It was a woman who met the roundabout from Gold Hill but the Mini which left at Brass Way.
- 3. Miss Ellis left by way of Silver

Street but the Estate turned off at Copper Row.

- Mr Price, in his Maxi, took the first turning off, which wasn't Lead Lane or Copper Row.
- Neither Mrs Downs' Van nor Mr Lucas used Copper Row or Silver Street.
 Here Paynting paused and re-

luctantly prepared himself for an apologetic meeting with his superiors.

Perhaps you can do better by

naming the driver of each car, the road it arrived by and the one it left by and so be able to say which car and driver should be investigated.

To help you sort out the facts, the grid can be used: enter a/for a positive piece of information and a X for a negative one. Of course, no driver arrived and left by the same road.

GOODBYE TO

As this is going to be the last time that Kit Korner will appear in this form I will use this opportunity to review the previous 12 issues and to relate to you some of the points I have learnt from writing

It may come as a surprise to know that I have probably learnt more than anyone who has come to me with a problem will ever learn. In the last year, about kit building, I should therefore like to thank all of those people who made so many blunders and kept me busy trying to robus them.

From the very beginning I assumed hat most of my readers knew little or othing about construction as this was he best way of reaching everyone. I progressed as time went on to consider

art. These I tried to explain in the simplest terms so that they followed through from the previous articles. From the limited response I have had this worked quite well. Some readers and friends, hower or, who already had considerable experience in this teld were only really interested in the specific binsix had to prevent the second of the previous second of the

As a result of reducing production costs the difference in price between kit and ready built models has been reduced to a point where, to a kit builder, it is tempting to buy the ready built model.

I would still not do this, as to reduce the cost involved it appears that the manufacturers have failed to maintain quality. This is apparent in many of the newer models. It is therefore a great pity that so few micros are offered in kit form.

Even when complicated modifications are required for, let us say, a screen memory expansion I would prefer to buy the circuit diagram from the company involved at the modification price and do the work myself.

I feel most strongly that it is essential to know how your machine works if you are going to use it to the full.

Also, I would not undertake to build a kit with only assembly instructions. As shown with the early ZX81s the instructions were at fault, at one point, whereas the circuit

I am very fortunate in having access to a complete tool kit and workshop which I have found indispensible when it comes to constrution. This is also part of my job function anyway, so I am doubly fortunate.

At one stage I outlined the minimum tool kit and later went on to fill it out somewhat. I discovered later that I should not have recommended the minimum version but should have gone for something a little larger.

I hope that if some people did try to build a kit with the minimum of tools that they managed. I have heard no complaints.

Another field that I am fortunate to be a spectator in is that of addons. Although I have not built many of these they are usually so simple as to draw no comment.

The kits that are more complicated normally arrive with wellwritten instructions and are so numerous that it would require the whole of this magazine to list them, let alone review them all. The only point that comes to mind here is make make sure that the kit does come with a full set of instructions and diacrams.

If they do not you should ask for them as a condition of purchase saying that you do not consider the kit complete without having them. Be a little wary of kits that either originate from abroad or, worse, are mailed from overseas without there being an office in this country.

Not all, or even many, are pirates but someone will be unfortunate and find one that is. The only thing to do is to inform the Director of Fair Trading and all the magazines you care to. You may be lucky and with the possible help of others be able to salvage something from the kit. I sincerely hope that no one does discover a pirate the hard way.

I did not, at the very beginning, believe that I "knew it all" and did consult as many of my friends and colleagues as I could to find out their opinion which has proved useful in many instances.

Unfortunately many of the mistakes I have come across could have been avoided so easily if the offender had consulted someone with a little more experience for just five minutes.

I have stressed the point in the past that if you feel uneasy about some aspect of kit building, stop and consults someone about it. Even contact the suppliers if need be. They will be only too grateful to you for bringing the difficulty to their attention. I am afraid that this will not be the last time I will mention this thouch.

I hope that this page has been of some help to those who have begun kit building and that you have enjoyed it as much as I.

INDESCRIBABLE! UNBELIEVABLE!

Two entirely different like of which has never been se certainly not in any 'arcade' gam

First you have to beat the astroids. Easy at first but when hit they split and multiply, then split and multiply yet again before they can be completely killed off. But as they split, so they come in at entirely different angles... As the game progresses more and more appear.

If you survive the astroids, down swoops the swarm! These horrors more suddenly break away and attack, raining down bombs. Then its back to harder astroids...and so on... There are bonus score and extra lives, and sound of course.

THE NOT SO INSTANT KARMA ...

Having treated my micro to a memory upgrade recently, I was quite impatient to try out a big Adventure on it, so I decided to see if I could lose my way in "Lords of Karma".

The game opens in the city of Golconda which is surrounded by mountains and forests. Sunlight filters softly through the leaves of Aspen, Oak, Redwood and Pine, to help guide you through the paths and clearings that abound. You will have a long journey, for I estimate that there are upwards of 100 locations in the game. Your aim it to collect as many

"Karma Points" as possible. These are obtained by carrying out brave and kind deeds.

Some deeds, of course, are braver and kinder than others, so you might be easily misled into thinking that because you had gained points, you had performed the right deed in the right place with the right equipment. This is not necessarily

PRACTICAL PROGRAMMING

THE STONE, PAPER, SCISSORS GAME

In the last 40 years or so there has been a great deal of work done on the mathematical theory of games. The interest in the subject is due mainly to applications in economics and warfare, but the theory does have applications in game playing, and the ideas and terminology came mainly from such games as chess, bridge and poker.

Although the theory of games involves some very difficult mathematics it is possible to understand and use some of the simpler ideas without any knowledge of advanced mathematics.

Let us begin by looking at two very simple games, Matching Pennies and Stone, Paper, Scissors.

In Matching Pennies the two players, A and B, simultaneously laydown their coins; if the two coins both show heads or both show tails, A wins; if the two coins show different sides, B wins.

In Stone, Paper, Scissors, the two players hold out their hands simultaneously, with a closed fist for stone, a fully extended hand for paper, and two fingers extended for scissors.

Scissors.

The winner is determined by the scheme Stone blunts Scissors, Scissors cut Paper, Paper wraps Stone, while if both players show the same

the game is a draw.

We can represent these games
by the following tables:

Table 1: Matching Pennies

	H	eads	Tails
- Heads		1	-1
A Tails		-1	1
Table 2: S	tone, Pa	per, Sc.	issors
		D D	0-1
	Stone	Paper	Scissors
Stone	Stone 0	Paper -1	Scissors 1
Stone A Paper	Stone 0 1	Paper -1 0	Scissors 1 -1

The entries in the tables represent A's winnings, so that a positive number means that A receives a payment from B and a negative number means that A makes a payment to B.

We can now imagine the games being played by A choosing a row from the table and B choosing a column, the result being determined by the entry where the chosen row and column intersect.

Taking this view of a game we can start by drawing up a table at random and defining a game by the

tabl	e. Cor	isider th	ne tollo	wing	table:
T	able 3				
			В		
		1	2	3	4
	1	3	2	-3	-2
A	2	1	3	2	-2
Δ	3	2	4	2	1
	4	-2	1	3	0

If A chooses row 2 and B chooses column 1, A wins 1; if A chooses row 2 and B chooses column 4, B wins 2, etc.

In all these games, A and B make their moves without knowing what the other is going to do; if either player knew the other player's move before making his own he could always win. For example, in Matching Pennies, if A knew that B had played heads, A would also play heads and win.

MAKING RANDOM CHOICES WORK

In any game, we expect that there is some "good" way of playing that will give a better result than uninformed play. In Matching Pennies and Stone,

Paper, Scissors, it is clear that if our opponent knows what we are going to do we will lose, so we must make some random choice; it is also fairly easy to see that in both these games the best way to play is to make all the choices equally likely.

For example, in Matching Pennies the best strategy is to play heads 50% of the time and tails 50% of the time, at random. If one player does this he will, on average, win half the time and lose half the time, regardless of what the other player does.

However, if one player deviates from the 50-50 random play and the other player catches on to what he is doing, he can adjust his play to

give himself a better chance of win-

Suppose that player A chooses heads twice as often as tails; if B discovers this he can win by choosing tails twice as often as head, since in this situation, out of every nine plays we will get, on average, two heads twice, two tails twice, one head and one tail five times.

Thus B will win five times for each four times he loses, and in the long run will come out ahead.

In general, if A plays heads and tails at random, but with different probabilities, B can win in the long run by using the same probabilities but switching them from heads to tails and vice versa.

Program 1 plays Matching Pennies in this fashion. The variable Q is used for the probability that the program will play "tails", and is initially set to 1/2.

The program keeps count of the number of times the player has chosen heads and tails in the variables NH and NT, and after 10 games Q is recalculated and set equal to the probability that the player has been using for "heads".

Of course, playing at random with

probabilities different from 12 is not the only way of deviating from the best strategy. If you play heads and tails equally often but in a regular sequence, such as H.F.H.T... or H.H.T.T.H.H.T.T... your opponent can win by learning the sequence and playing accordingly.

PRACTICAL **PROGRAMMING**

to handle this situation, but it would he very difficult to write a program capable of detecting more than the

simplest semiences

If we return to the game defined by Table 3 we find a completely different situation. In the case of Matching Pennies and Stone, Paper, Scissors, we could work from the original forms of the games or from the symmetry of the tables, but here we have an apparently random collection of numbers and no "original" form for the game

There is a way of finding the best play in this particular case, and to understand how it works it is easiest to start by imagining that B plays first and A plays knowing B's move.

If B chooses column 1. A will choose row 1, because the 3 in row 1. column 1 is the largest entry in column 1.

If B chooses column 2. A will choose row 3, because the 4 in row 3. column 2 is the largest entry in

If B chooses column 3. A will chose row 4, because the 3 in row 4, column 3 is the largest entry in column 3.

If B chooses column 4, A will choose row 3 because the 1 in row 3. column 4. is the largest entry in column 4

B can work this out in advance, so he will know that if he choose column 1 he will lose 3, if he chooses column 2 he will lose 4, if he chooses column 3 he will lose 3, and if he chooses column 4 he will lose 1. From this it appears that his best play is to choose column 4, as this gives him the smallest loss.

If we now change round and image that A plays first and B plays knowing A's move, we can go through a similar procedure, but this time B will be choosing the column containing the smallest en-

try. Summarising A's strategy, if he chooses row 1 he will lose 3, if he chooses row 2 he will lose 2, if he chooses row 3 he will win 1, and if he chooses row 4 he will lose 2, so it appears that his best play is to choose row 3.

In both cases we end up with the same choices, row 3 from A and column 4 from B. This does not

happen with every table (see what happens when you use this procedure on Tables 1 and 2).

The reason that both ways of working towards the solution give the same result is that Table 3 contains an entry that is at the same time the largest number in its column and the smallest number in its

In the terminology of game theory, an entry in a table that is the maximum of its row and the minimum of its column is called a saddle point. Thus, Table 3 has a saddle point at row 3, column 4, while Tables 1 and 2 have no saddle

In the situation of Table 3, where the best play is always to make the same choice, this choice is called a pure strategy; in the situation of Tables 1 and 2, where the best play is to make a random selection among the possible choices, the play is called a mixed strategy.

WHEN THERE IS NO SIMPLE WAY

The two games we have looked at that lead to a mixed strategy are easy to solve because of their symmetry. However, in more complicated cases it is not possible to find a solution by simple inspection as we were able to do with Matching Pennies and Stone, Paper, Scissors,

Table 4 has no saddle point and there is no simple way of finding the probabilities that give the best results for A and B.

There is a mathematical method that can be used on tables of any size and shape, but it is not easy to understand.

However, the mathematical method is not the only way to find the solution, and I will be continuing next month, describing a game which leads to Table 4 and explaining how to write a program that will "learn" the best solution.

SIMPLY THE BEST SOFTWARE IN THE WORLD

GETTING THE MOST

FROM YOUR MICROS

These days, there seem to be new developments in micros every five minutes. How can you stay in touch? Which Micro & Software Review brings you all the most important news and the most interestina facts every month.

As well as our unique buyers guide to software packages (which is undated every month) we review software in depth. This month we analyse PLANNERCALC and tell you whether its low cost represents good value, and how

We also take a long look at the new cash flow forecasting package CASHFAX. Every month we tell you what's available, what's in the pipeline and what's right for you - over a range of software for home business and school users.

We don't stint on hardware coverage either. Not only do we publish the most extensive buyers guide available (over 100 micros in detail) but we also publish reviews that really take machines

apart. This month

we put two British micros under the microscope - the new 64K MIMI 802, which made us wonder whether British could be best again. And the £89.95 JUPITER ACE which is not only very cheap, it's also the world's first micro to use FORTH. Does that make for speed, versatility and ease of with the mainframes?

With all this you get the best news, an informative (and fascinatina) letters page, and a problem-solver section written by two of the most respected experts in the business. November's issue is at all good newsaaents from October 15th, Don't miss it.

PIMANIA

Pimania is an aptly named computer adventure game. It sends players around in circles and quite probably turns them manic.

But with a specially commissioned gold and diamond sculpture-valued at £6,000 on offer as a prize, it is well worth the risk of trying to discover its secrets.

The adventure comes in cassette form for the 48K Sinclair Spectrum—although there are plans to put it into other computers in the new year—and is the brainchild of Porstmouth-based software house, Automata Cartography.

The idea follows the formula of the successful Kit Williams' book, Masquerade, which challenged readers to use clues in the book's illustrations, to discover the whereabouts of a jewelled hare which the author had buried at a secret loca-

Automata's prize is the Golden Sundial of Pi and although it is still in the designer's studio, we will bring you a photograph of it in our next

The sundial will not be hidden away but would-be solvers will have to sift through the numerous clues in Pimania to discover the "time and place" where it is metaphorically hidden.

The first person to get in touch with Automata and give the correct solution, wins the Golden Sundial. But the company's managing director, Mel Croucher is confident that it will be several months before any-body cracks it.

He told us: "You go through a series of Cates of Pi and the last one reveals exactly what we want by way of a solution. We are not encouraging people to start digging things up but hope they will meet us at the correct time and place."

at the correct time and place. Purchasers of the £10.00 cassette face their first puzzle almost as soon as the game has loaded-how to get started? The computer screen explains that one key will activate the game but then it's up to the player to press the right combination on the keyboard. I ended up going through the keys systematically before the obvious struck me. A specially commissioned £6,000 prize provides the best evidence that computer gaming has commod age. The Golden Sundial of P is the prize destined to grace the mantlegiece of the first person to solve an elaborate compute adventure. Pimania TERN PRATT thed his hand at Pimania — and from his report his mantle piece is likely to remain bare.

But after that hints and clues are liberally scattered in an Adventure enthusiast's dream of frustrating mazes, unlikely treasures and abrunt dead-ends.

Every time you stop and start again the treasures will be redistributed around the maze — but you can save the game during a successful run.

There is also an entertaining array of responses to the sort of desperate drivel which adventure games usually reduce me to, the: "Help! I can't take any more! Let me out!", variety. The sense of humour is strong throughout and belongs to programmer Christian Penfold.

He is also responsible for some ingenious graphics routines and sound effects which chart the player's progress through the Pinnan a calm. Acting as the guide is a cartoon character called the Pinnan. I couldn't work out whether he was a friend or foe. He has a good line in merry quips, a penchant for collecting some bizzare items for collecting some bizzare items and the ability to double up as a very able chours gift.

The program is written mostly in Basic and there are no elaborate precautions to prevent people listing it. But Mel Croucher is convinced that there are no short-cuts to the solution in doing this. He says: "If people want to work out the puzzle by wading through masses odde, they are welcome to try."

Part of the charm of Masquerade was Williams' insistence that the clues were just as accessible to a child's mind as an adult's. Croucher claims that this holds true for Pimania and another important criteria is that even after the competition has been solved, the owner still has a playable and well-presented game for his money.

Automata launches the game in mid-October and will be displaying the Golden Sundial at computer exhibitions.

Despite my own failure to discover the solution, I am keen that Computer and Video Games should share in the glory of winning the Sundial.

To this end we will be referring readers Pinania letters to Automata and hopefully printing any tips or helpful hints in our Mailbag section. So please write in if you think you can pass on something useful and perhaps the combined might of the C&VG readership can resolve the rurale of Pinania.

The only tips I can offer are:

 Look for clues even in the instructions.

Take a pencil and paper around the maze with you and map it out.
Dismiss nothing in the program

— even the music should be noted down — it could be significant. Good luck and watch out for red herrings!

FATHER XMAS

To: The Ed. Computer & Video Games 73rd Chimney past St Pauls London

Many of my regular customers are putting in most unusual orders this year. I have had requests for Genie's, Dragons, Atoms seems to be in great demand too. This electronic age has left me longing for the old days when dolls and footballs seemed to be the rage and made me feel quite old

It's got to the stage that when a young lad asks for a Pet, I hesitate to drop him in a puppy! Could you help by pointing out buying them — my elves will have to work out some kind of wholesale deal I imagine. If you could take the trouble to keep an old man up to date I would be very

COMMODORE VIC-20 The Vic-20 will be one of the

SANTA'S COM

most readily available microcomputers on sale this Chrietmas

It can be bought in most high street branches of Boots, Dixons, Rumbelows and Currys - plus computer specialists - for around £169

A compact computer with a moulded typewriter style keyboard which gives it an advantage over rivals like the Atari 400 and the Sinclair duo, the Vic works with an ordinary domestic TV set.

It comes with a manual written for the computer newcomer with examples and exercises but the old hand will find a lot of his questions unanswered. It does explain how to use the eight colour display and impressive four-voice sound facility.

The usable memory is 31K which does not compare well with recent additions to the market and it has a disappointing screen text dis-

play of 23 lines deep by 22 characters long.

DRAGON 32

With a toy company behind it. Wales' very own Dragon The 16K memory included 32 microcomputer should be a games-player's machine. It is! But despite all the

careful thought that has gone into it, there are reservations. It is a compact computer with a typewriter keyboard which utilises a norma! domestic TV and cassette recorder.

With 32K memory, colour graphics and sound for only £199 it also sounds a good

It uses the 6809E micro processor and much of its games software has been related Tandy Colour Com- five levels of graphics re-

The computer comes from the well-established US micro manufacturer Commodore which is backing it with a large range of peripherals, disc drives and a printer and, unusually,

some high-quality games. common cassette form and cartridges which plug into the back of the micro. These have the advantage of adding the necessary extra memory to the Basic machine to give good arcade quality games but cost upwards of £17.

Games-playing aids like joysticks and paddles, plus printers disc drives memory expansions and light pens are available from Commodore and independent sources.

The Vic is a reliable loader of cassette software but you will need to buy the Commodore recorder (cost £44) to use with it

The low basic memory and cumbersome text display give the year old Vic a dated look but it has some high quality games software

puter. As it is such a new machine what software there is comes from the manufacturers.

Dragon Data is a subsidiary of Mettoy, toy company and the emphasis has been put on the computer being a

The ports and sockets are all clearly marked and the manual gives a clear diagram showing how to set it up. The manual tries valiantly and should help most beginners into understanding the beast.

There are nine colours on the Dragon 32 and it offers a comprehensive variety of converted from the closely musical options. There are

MPUTER CHOICE

solutions enabling the user to draw lines arcs circles and utilises a PAINT operation for solid areas.

The display uses only a small area of the TV set and does look rather twee. although it manages 16 lines of 32 character text disnlav

On paper the Dragon sounds a marvellous machine but so far the software has seemed unimpressive and it has not been around long enough to prove that really good games can be put on it.

ATARI 400 and 800

hold in the UK market - and will be a top seller this Christmas There are two models on available to enable you to

sale, the 400 which costs £199 and the 800 at £599.95. Both the 400 and the 800

have many features in common. The machines have very highly regarded graphics capabilities — with 29 graphics keys, and 16 different colours with 16 intensities, which simply means the machines are capable of producing a very good game of Space In-

vaders. Games are a good starting noint for the Atari computers as there is a rapidly exnanding number of games available - mainly imported but some home produced - for the 400 and 800. Many of these games are of exceptional quality and very well known, such as Pacman and Missile Command, Joysticks and Paddles are also available.

Programs can be loaded into the 400 from cassette or plugged directly into the console for the cartridge programs. The 800 can be connected to a disc drive family computer with imunit which is also manufactured by Atari.

added by installing either ably over-priced.

able for the 800, and two for the 400. Modem devices are

gain access to telecommunications information networks. The basic differences be-

tween the two machines are that the 800 offers you an electric typewriter style keyboard whereas the 400 has the touch sensitive keys.

The 400 has only two languages which can be used - Basic and Assembly language - the 800 is compat-

ible with Extended Basic. Pilot and Pascal. Both machines are good

teachers. The sound capabilities plus the instruction manuals and tapes teach you computing, illustrating points on the screen and speaking to you in synthesised speech. The Basic program, however, does not come with the Atari 400 but has to be purchased separately at approximately £50 which includes two instruction manuals. There are a number of other educational

packages available. The Atari 400 is a good pressive games and educational packages available in Extra memory can be quantity. The 800 is prob-

Rinatone are planning to buy in games software from a softattitude to Sinclair about

COLOUR GENIE

The Colour Genie will be launched from the Lowe Electronics stable late in October.

The TRS-80 compatible Video Genie was one of the popular early personal computers and the company are producing the colour version at £199 inclusive

It has eight colours, a 40 character by 24 line text display and high resolution graphics.

Final decisions still have to be made about the text display and the keyboard but Binatone claim

ware house to support the that the keyboard will be a machine, and are taking a similar reasonable size and not touch sensitive

ing duties.

Where this machine scores over some of its cheaper rivals is in having close compatibility to its predecessor so that games with the colour added can be easily converted

Already planned are 10 cassettes for launching in the first two months after the micro itself has been brought out. This range should increase to 25 cassettes

The computer will include a VERIFY command to help in sav- independent companies. ing programs and will also be

games software being written by Lowe is also supporting the bringing out a matching cassette computer with a range of

recorder although Lowe claims peripherals which includes: a that any good quality recorder 16K RAMcard, joysticks, light pen will perform the loading and sav- and printer interface cable.

SANTA'S CHOICE

The computer isn't a toy. But it can be a games-playing machine with a whole host of possibilities. It can take the part of an opponent in the traditional

games when there isn't a human one available. Most computers now offer

quite sonhisticated chess programs which can play up to club standard Reversi (or Othello). backgammon and draughts are games where the computer can usually heat all but the hest human players.

Many games actually improve when played on a computer. Wargaming is an example where the location of a secret squadron can be left lurking in the comnuters memory until they spring out to surprise their enemy.

Computers can also prove an aid to established games. The role playing fantasy genre of games like Dungeons and Dragons, can now be catered for by computer programs which help plan and design the worlds, treasures and monsters needed for role-playing. A computer version of this type of game is, Adventure, which has proved so popular that there are now countless versions available on all types of machine.

But still the most popular games are the arcade variety. needing quick hand-to-eye coordination. These are very different from the early space invaders (although they owe a lot to

Arcade games now use 3D graphics, offer different scenarios which require different tactics to master and some fascinating games concepts.

The latest generation of computers are quite capable of reproducing these, mirroring the speed which is essential to the play, the graphical detail so necessary to fleshing out the story-line and the sound effects which can drive the player to

These can be among the most demanding to program but certainly not beyond the determined home user.

IN THE HIGH ST.

This year has seen microcomputers develop a "High Street presence" in stores like W. H. Smiths, Currys, Rumbelows and Dixons.

MORE THAN ATOY It has taken the microcomputer step in the direction of a com-lable to be read. industry a long time to admit that its current success is down to the common or parden space

invader This time last year many of the micro manufacturers were openly disdainful of computer

gaming and keen to give the impression that their machines were husiness tools

Now the pendulum has swung the other way and the talk is of computers as toys and a £50 price tag is helping to promote that image

The truth lies somewhere inhetween While many computers are used only for games, they are still much more than toys Loading up a game of space invaders and blasting away to a high record with some frantic

nuter education The Basic language is a sim-

grash the way to print their name 40 times on the household's TV

Racic is a simple and satisshould not be long before the user starts using it to produce simple and ultimately, complicated games. While the games themselves may not be the most useful contribution to society. the programming skills needed to produce them can be very demanding Computers will play an in-

creasingly important role in our society and learning to use them is going to be just as important Games playing is as good a way keyboard pummelling is the first as any of doing this.

Zayyon: 3D graphics in the arcade

This has made them more in what kilobyte stands for, visible and accessible but done little to help the uninitiated to appreciate just duce most simple arcade whay they are getting for their money.

Firstly make a checklist of all the hones and aims you have for your microcomputer and the sort of games you would like to play on it. Then go along to the com-

puter dealer or high street chain and collar a salesman. Make sure the salesman you have collared knows his way around the computer. he is going to be your first port-of-call if you need to go back for help later on. Don't

let him confuse you with jargon, every computer term can be broken down into plain English. Memory sizes are measured in kilobytes, usually abbreviated to "K". Rather

nuters now come with a display tape but a good salesman should be able to show how to produce high resolution using DRAW and PLOT commands. Ask if userdefinable graphics are possible on the machine these enable you to draw your own space invaders.

What colours and sounds are possible. Look out for than getting bogged down text on the screen is the wrong key.

Ask to see a copy of the manual and look through a ple one to understand and most section to see if it includes children over 10 can quickly examples of code and exercises for the user to try out and learn from. Is it expressed in plain English? tvinn language to learn and it. Does it have a good index at the back and a good description of the chapters for easy reference at the front?

> there for the machine and does it include the type of games programs you are computer manufacturer supports his own machine with software or if it all comes from independent enftware houses Things like joysticks, light

What software back-up is

pens, printers and toolkits are known as peripherals. These are the add-on extras which can boost a computer's potential. Again check on the range and where these items can be obtained from

The bugbear of many a computer owner is loading software. Ask the salesman to demonstrate a simple loading procedure to you and watch out for difficulties and excuses Check if the machine needs a special cassette recorder and if so what additional expense this will cause.

THE KEY AREAS

Graphics, sound and memory are three key areas to look at when choosing a good games com-

The memory will be needed to produce the text-based adventure games and the vast lines of DATA which they usually feature. The graphics facilities should include high-resolution and userdefinable graphics to help repro-

duce the arcade game quality of game design. Ideally the sound chip should include a white noise voice to give the laser blast and explosion noises which are such a feature of arcade games.

Fight colours will usually suffice for most screen displays and if the computer does not offer a good keyboard, check to see if there is a joystick available or flicker at the edge of the you could end up frustrated at screen and make sure the being blown up while pressing

because now The Empire Strikes Back where it really hurts. At home

So climb into your Snowspeeder, aim for the "bomb hatch," try to gain The Force It's the only way the At Ats are at your mercy.

The Imperial Walkers stop at nothing. They shoot "smart bombs" that follow you, and no matter how much you try to weaken and destroy them with your barrage of missiles they seem to keep on moving,

them they'll blow up the entire base!

It's up to you to strike back while there's still time.

MAZE MAN WITH STICKY FINGERS!

PUCKMAN

With the disappearance of Bug Byte's excellent version of Pacman for the VIC20 under the threat of legal action from Atari - the owners of the Pacman copyright we review another version of the game

Puckman has all the principle features of the arcade game. The ghosts chase you through a maze full of dots which you must eat up as you go along. If you eat the power pills in the corners of the maze you

with the little vellow gobbler.

can then eat the ghosts for a brief few seconds to score bonus points. Every so often a bunch of cherries appear in the centre of the maze which, if you can manage to eat them are worth a

lot of extra points. The graphics are surprisingly clear considering that the game is written for the

My main criticism is that the Pacman is difficult to negotiate through the maze as

the keys that move him tend to stick Once you press a key to move him he will continue in that direction even when you take your finger off the key. Puckman is available from Mac games

of Port Talbot at £5.50. Getting started

Value Playability

BEWARE THE BLACK RIDERS

SHADOWFAX

Shadowfax, as Lord of the Rings fans will know, is a horse belonging to Gandalf the White Wizard - the swiftest horse in

This is your chance to ride Shadowfax as you gallon against the Black Riders of

Sauron - the Dark Lord of Mordor. The idea of the name is to shoot as many of the advancing Black Riders as possible. To kill the riders you must release a thunderbolt by pressing the shift key. You must quickly release the key again when the bolt is centred on a Black Rider. This will cause the bolt to explode - killing the rider which will then glow red and gradually fade away. If you fail to release the key quickly enough the bolt will pass through your target and leave him unharmed.

But it's the graphics on Shadowfax that are truly impressive. The horses look and sound - most lifelike

My one criticism of the game is the lack of variety in terms of opponents. It would have been really nice to have a few Orcs and Elves to deal with as well as the dark

Despite this - my overall impression was of a most enjoyable and compulsive game. At £6.99 Shadowfax is every bit as playable as some of the cartridge games I have seen retailing at well over £20. Shadowfax comes on cassette for the

VIC software writers - Postern Limited and will be available from most good computer shops or by mail order from the

Cheltenham based company. Getting started Value

OFTWARE SOFTWARE SOFTWARE SOF

VICTIMS OF THE FISHY PIRATE

SHARK ATTACK

he sharks are after you, jaws agape and hungry for flesh. Your only escape is to trap them in your vellow net which you trail behind you as you swim away from them.

The game is made more difficult by the fact that the sharks keep chomping away at the net hiting out holes large enough for

If you manage to hem in all the sharks little green octopi will begin to appear from whom you must also escape, or be dragged to the bottom of the ocean by their

The key to success in Shark Attack is to manneuvrability. You have to choose just the right second to dash in with your net and trap a fish.

But he careful when you get close to one as they are programmed to turn to-

My main gripes were with the graphics and the packaging. Pirates are mentioned on the packet: "You are . . . thrown overboard from a Pirate ship"

I was expecting pirates to appear on my say: "Watch out you pesky VIC owner we're going to throw you to the sharks" But alas, no pirates.

The sharks were pretty disappointing too. If they resembled any sort of swimming creature at all I would say a tadpole

The octopi were a little more realistic than the sharks but appeared to stay still It would have been better if they had

ALL'S FAIR ON THE FAIRWAY

Just when you thought it was safe to go back on the golf course - here comes

This is a Frogger type game in which Preppie - the American slang word for junior school pupils - has to collect golf balls from an extremely dangerous golf

And it's not just an easy afternoon stroll for little Preppie - danger lurks around every runaway ball!

The first problem he encounters is actually getting across the fairway. There are nasty lawn mowers which he must dodge as they criss-cross the course. If he manages to avoid the mean mowers there's a river to cross. He has to jump from barge to barge as they float serenely

This reviewer failed to get the little green beasties to do anything.

Despite my reservations I did find Shark Attack a most playable game. It's not easy to trap the sharks, and you really can't stop until you've succeeded.

In fact the game had several members of the Computer and Video Games staff hooked from the moment we plugged in our

VICI Shark Attack runs on an unexpanded VIC and is available from Slough based Romik Software at £9.99.

 Getting started Value Playability

As the game progresses the lawn-mowers transform into golf carts and then would you believe - Bulldozers! The barges perform a strange metamorphosis into floating logs and there are crocodiles as an added hazard in the river.

Just to make things even more difficult the game speeds up as you reach the different stages. A further hazard is a frog which appears

on later screens and leaps along the previously safe riverbank squashing everything that gets in its way. So by the time you reach the sixth screen you are really being tested. And it doesn't end there!

The game uses multi-colour high-res graphics, and it is unlikely that you will find such quality in any other game out at

Another excellent feature is the music. As Preppie runs around collecting golf balls the computer plays three catchy

ET'S HUNT THE INVADERS

As the race continues among software houses to produce games for the Sinclair Spectrum we decided to test the three Snace Invader games that have so far been produced for this fledgling machine. Spectral Invaders was the first game on the market for the Spectrum and marked another first for the Livernool firm Bug

The game is a fairly authentic version of the arcade classic. It loaded without difficulty and started according to the

can hardly fail to hit something once you get a missile in the air. The mystery flying saucers didn't look

too much like flying saucers and moved so slowly they could be picked off with ease. About the only department in which the Psion game beat the other two versions was sound. The Spectrum produced clear well synchronised bleeps as the ships

Space Raiders loaded well - the Psion logo appearing seconds after the play button on tape was depressed - cutting

not explode until a split second after it had been hit, continuing to move right or left. The missiles were also slow movers -

ierking awkwardly skywards. The Invaders themselves did not explode immediately they had been hit either causing you to hesitate, unsure if you had

On the plus side Spectral Invaders was the only game of the three we looked at that offered a two player game. It had the fastest and most authentic mystery flying saucers. It also had the best score board, flashing to indicate player one or two. Despite its faults. Spectral Invaders was

the only version that looked and felt at all similar to arcade Space Invaders. Psion Software - the official Sinclair software writers - entered the field with Space Raiders, the slowest version we

The Invaders don't move down the screen in vertical columns in this version making them particularly easy to hit. Their side-stepping motion means that the gaps between the columns are blocked so you

with other Spectrum games. Southampton firm Quicksilva were hot on the heels of Bug Byte with their version of Invaders for the Spectrum - Space

Intruders. This was the fastest of the three games. So fast in fact that it detracted from the playability of the game. Not because it you had such a speed advantage over the down with ease.

The missiles could be fired far too fast and furiously. You could kill a whole column of Invaders in a split second, sometimes without dodging right or left, which in turn made the fleet relatively easy to

In fairness to Quicksilva their version does have a number of features which the others do not.

Most useful of these is a hold button which enables you to answer the phone or make a cup of tea and then continue where you left off when you are ready. It also has a high score facility which enables you to _____

MESOFTWARE SOFTWARE SOFTWAR

enter the top ten high scores of the session with the initials of the players. Snace Intruders displays clear instruc-

tions on the screen and also gives you the value of the various Invaders. Extra features are, however, no substitute for a good playable game, which I do not feel this version from Quicksilva gives you.

of Space Invaders on the Spectrum so far.

BOMBS, SMART GAME DEFENDER

Defender is not a game you can pick up in five minutes before leaving for a dinner

Three hours later you will be cursing the anxious would-be host for phoning to interrupt you while you still had a smart bomb and three humanoids left on wave three. In the arcades. Defender players earned

their expertise through a mint of 10p's. On the BBC Model B Microcomputer, you have to be prepared to sacrifice time lots of it - to enjoy the satisfaction of smart-bombing the Pods at the start of wave three.

A lot of people are put off Defender by the vast range of control buttons. There are seven of them: Up, Down, Thrust, Fire, Smart Bomb, Reverse and Hyperspace.

master them but slowly the game starts to make sense. Up and Down come first, then remember not to Thrust too quickly and don't spare the Fire button unless the humanoids, you must defend, are climbing into dangerous positions on the mountainous scenery.

Soon you will have cleared the first wave of 15 Lander aliens and found yourself just starting to gain confidence in Reverse and thumping down on the Smart Bomb in tight situations. For the uninitiated, Defender puts you in

a craft above a bumpy landscape, charged with the task of stopping aliens kidnapping humanoid figures from the surface.

The most dangerous opponents are the

Mutant. Baiter and Swarmer craft but you are responsible for the appearance of all of

Mutants only appear if you let a Lander craft steal a humanoid to the top of the

Baiters, only if you dally too long on one wave and Swarmers only come into the game when you blow-up a harmless Pod so only do it when you are ready to deal with them.

In Defender you are responsible for everything that happens to you. And even the "easy" first wave is crucial to your future survival in the game so treat it with

Extra lives are awarded every 10,000 points, an extra Smart Bomb too, but a new batch of humanoids is only given to you each fourth wave. And if you lose all your humanoids, all hell is let loose.

When you have just flown your last man into a pack of Swarmers, quite forgetting that you still had another Smart Bomb left and the split second the machine takes to set up a new game seems like a frustrating eternity, you'll realise why Defender has enjoyed such a long reign as king of the arcade games. Sheer compulsion at £9.95 inclusive of Vat. 7

Meet some of the best brains in Brita

Northem Belle VUE,

BELLEVUE, **NOVEMBER 25-27, 1982**

Opening Times 10am-6pm each day

The brains we're talking about are the printed circuit, silicon-chip variety and you'll find them (thinking hard) in the vast range of exhibits at The Northern Computer Fair. The show covers the fields of personal computing, home computing, small business systems and associated software, through computer books to video games, with a special attraction being the ZX 81 Sinclair Village. So whether you're a businessman (or woman) who needs to keep up to date with the latest developments in this fascinating field, a die-hard computer enthusiast, or simply interested in the subject, you'll find what you're looking for at the Northern Computer Fair.

Ticket prices at the door are £2.00 for adults and £1.00 for children under 16, but special party rates are available for 20 people or more with the organiser admitted free. For more information contact IPC Exhibitions, Surrey House, 1 Throwley Way, Sutton, Surrey SM1 4QQ. Tel-01-643 8040.

FOR ZX 81 AND SPECTRUM COMPUTERS LISING 94 DC ADAPTORS

£13.95 +£1.40 p/p

PROTECT YOUR PROGRAMMES WITH THIS RECHARGEABLE BATTERY PACK AT LAST! The answer to one of the major problems facing personal computer programmers and users; - POOR MAINS SUPPLIES

CAUSING HAVOC, WHILE YOU SPEND HOURS TRYING TO ENTER YOUR CAREFULLY PREPARED PROGRAMMES. Now Adaptors and Eliminators, who have produced nearly 70% of all ZX Mains Adaptors, bring you BATTPACK -a rechargeable 9v

Ni-Cad battery pack and transient suppressor, housed in a complementary black ABS case that simply plugs into your ZX adaptor in

BATTPACK ensures the voltage into your ZX computer never drops below 9v, thereby eliminating the possibility of a programme crash because of a split second mains dropout! (One cycle is all it needs!) BATTPACK also suppresses transients and RFI using carefully selected capacitors. Your ZX Adaptor keeps the BATTPACK at full charge even when in use -so its always ready for emergencies. Even in the event of a full power cut BATTPACK will run your ZX computer for at least 30 minutes giving you time to save your programme on a cassette or print a hard copy on your ZX printer. BATTPACK comes complete with all connecting leads and is ready

for use. ORDER NOW — SAVE NOT ONLY YOUR PROGRAMMES BUT ALSO YOUR TEMPER!!

MAIL ORDER ONLY. PLEASE ALLOW 28 DAYS FOR DELIVERY.
